Cellular Phones, Public Fears, and a Culture of Precaution Adam Burgess,2004 This is the first account of the health panic surrounding cellular phones that developed in the mid 1990s Treating the issue as more social construction than evident scientific problem it tells the story of how this originally American anxiety diffused internationally having an even bigger impact in countries such as Italy Burgess highlights the contrasting reactions to the issue ranging from positive indifference in Finland to those such as the UK where precautionary measures were taken These differences are located within the emergence of a precautionary culture driven by institutional insecurity that first appeared in the US and is now most evident in Europe Anxieties about cell phone radiowaves are also situated historically in the very different reactions to technologies such as x rays and in the more similar microwave suspicions about television In addition Burgess outlines a history and sociology of what is despite media driven anxieties a spectacularly successful device

Implantable Defibrillator Therapy: A Clinical Guide Antonio Pacifico, Philip D. Henry, Gust H. Bardy, Martin Borggrefe, Francis E. Marchlinski, Andrea Natale, Bruce L. Wilkoff, 2012-12-06 Implantable defibrillators as originally conceived by Michel Mirowski were limited to the detection and automatic termination of ventricular fibrillation In the original AID device the detection algorithm sought to distinguish sinus rhythm from ventricular fibrillation by identifying the more sinusoidal waveform of ventricular fibrillation The therapeutic intervention was elicited only once deadly polymorphic rhythms had developed It was rapidly learned however that ventricular fibrillation is usually preceded by ventricular tachycardia Mirowski recognized the pivotal importance of developing algorithms based on heart rate Ventricular tachycardia detection allowed the successful development of interventions for the termination of ventricular tachyarrhythmias before they degenerated into ventricular fibrillation Current device therapy no longer confines itself to the termination of chaotic rhythms but seeks to prevent them Diagnostic algorithms moved upward along the chain of events leading to catastrophic rhythms Rate smoothing algorithms were developed to prevent postextrasystolic pauses from triggering ventricular and atrial tachyarrhythmias Beyond the renaissance of ectopy centered strategies long term prevention received increasing attention Multisite pacing therapies provided by Arrhythmia Management Devices were designed to reduce the arrhythmia burden and optimize the synergy of cardiac contraction and relaxation Clinical evidence now suggests that atrial fibrillation prevention by pacing is feasible and that biventricular pacing may be of benefit in selected patients with heart failure However these applications of device therapy that generally require ventricular defibrillation backup remain investigational and were not considered in this book

Communications Systems Management Handbook, Sixth Edition Anura Guruge, Lisa Gaetta, 1999-10-25 Just a decade ago many industry luminaries predicted the collapse of the centralized data center and IT structure In its place would be a more decentralized client server model built

upon the Open Systems Interconnect OSI networking architecture. However, client server never fully realized all of its promises and OSI floundered. Now instead of client server and OSI we have the Web based model and TCP/IP. Together Web oriented technologies i.e. browsers, web servers, HTML, Java and TCP/IP are completely changing how the enterprise views its network. Instead of serving as primarily an internal utility, the enterprise network is now a vital means of delivering products and services and of tying an enterprise more closely to its customers, partners and suppliers. The impact to the very structure of the enterprise network could not be more profound.

Providing extensive coverage of planning networking LANs, systems management, communications issues and trends, *Communications Systems Management Handbook* 6th Edition is your most reliable source for solid, dependable solutions to real world data communications problems. The tips, strategies and case studies provided do more than just save you time and money. They also save your data communications network and with it your professional life. This new edition of the *Communications Systems Management Handbook* provides you with detailed information on the different facets of change in the enterprise network: Enterprise network architectures, LAN and campus networking, Remote access, WAN, Data centers, Client and servers, Security, Network Management. What's more, the New Edition is dramatically restructured, providing a more logical grouping of articles into discrete sections that bring focus to a particular enterprise networking topic. In addition, the content of this edition has been substantially updated. Almost three quarters of the articles are new to this edition. The common theme throughout the handbook is the change that the enterprise network is undergoing and how to manage it. The handbook's generous use of illustrations simplifies the technical workings of networks and communications systems. The comprehensive index makes it easy to find the topics you want and related topics. And because each chapter is written by an expert with first hand experience in data communications, no other book gives you such a full range of perspectives and explanations of the technical, planning, administrative, personnel and budget challenges of the communication manager's job. Covering everything from electronic commerce to multimedia, from system design and cost allocation to Ethernet switches and the impact of virtual private networks, this is your one stop source for the best, most essential data communications expertise to be found anywhere. The *Communications Systems Management Handbook* serves as an information tool for proven advice and methods on managing network services and costs, creating networking solutions and preparing for advanced communications network technologies.
