## **Energy Antitrust Handbook**

Donald E. Hardy, 2002 The Energy Antitrust Handbook presents a guide to an industry of increasing importance to the U S economy The Handbook is designed to assist energy regulatory and antitrust lawyers in understanding the multilayered complexity of this field Historically energy has been at the center of the development of the antitrust laws The oil industry for example has been the source of many seminal antitrust cases while the electric and natural gas industries were considered to be the province of regulation However competition began to enter these two industries and develop particularly in the late 1980s and 1990s This book provides a basic background of the history and economic structure of electricity and gas and the applicable regulatory structure In addition it explains the application of antitrust laws to these industries both by the courts and the agencies particularly the Federal Energy Regulatory Commission FERC The Energy Antitrust Handbook also offers insight on how the past may be a prologue for issues that are currently in flux and reflects the greater attention being given to electricity issues by the courts and federal agencies Lawyers familiar with antitrust will gain an understanding of gas and electricity product issues the market structure and the unique application of the antitrust laws to these industries Lawyers and executives familiar with these industries but not with antitrust law will find this book provides both basic as well as pervasive coverage of the antitrust laws applicable to energy

## **Solar Assessment Guidance**

Karthik Karuppu, Venk Sitaraman, NVICO, 2019-09-12 The Earth receives 174 Petawatts PW of incoming solar radiation at the upper atmosphere Approximately 30 % of its radiation is reflected back to space while the rest of 71 % 124 PW is absorbed by clouds oceans and land masses The world cumulative solar PV installed capacity reached almost 398 Gigawatts GW in 2018 This is only about 0.3 % of solar energy utilization from the sun There is a wide gap of utilization is noticed due to lack of technology In 1931 selenium cell efficiency of 1% invented then in 1980 thin films cell efficiency of 6.7% introduced After 2013 efficiency of 18 to 21% achieved by crystalline silicon technology In India the installed capacity of till 2018 is of

350 GW which includes renewable and non renewable energy sources In that the cumulative installed solar capacity is only about 25 GW By 2022 India wants to install 175 Gigawatt GW of renewable power capacity which corresponds to around half of its total electricity production To achieve this capacity by improving solar cell efficiency from 20 % to 40 % augmentation of grid infrastructure massive subsidies and skilled manpower of 3 lakhs persons for the next three years to achieve the planned target Most of the world s population lives in areas with solar insolation levels of 150 to 300 watts m or 3.5 to 7.0 kWh m per day In India the per capita electricity consumption from 2017 to 2018 was around 1150 to 2000 kWh The electricity demand in the country will grow at 7 % between FY 2017 and FY 2022 and 57 % of the total electricity capacity will be generated from renewable sources by 2027 as per Central Electricity Authority CEA In 2011 a report by the International Energy Agency IEA found that solar energy technologies such as photovoltaic solar hot water and concentrated solar power could provide a third of the world s energy by 2060

**Handbook of Energy Transitions** Muhammad Asif, 2022-10-14 The global energy scenario is undergoing an unprecedented transition In the wake of enormous challenges such as increased population higher energy demands increasing greenhouse gas emissions depleting fossil fuel reserves volatile energy prices geopolitical concerns and energy insecurity issues the energy sector is experiencing a transition in terms of energy resources and their utilization This modern transition is historically more dynamic and multidimensional compared to the past considering the vast technological advancements socioeconomic implications and political responses and ever evolving global policies and regulations Energy insecurity in terms of its critical dimensions access affordability and reliability remains a major problem hindering the socioeconomic progress in developing countries The Handbook of Energy Transitions presents a holistic account of the 21st century energy transition away from fossil fuels It provides an overview of the unfolding transition in terms of overall dimensions drivers trends barriers policies and geopolitics and then discusses transition in terms of particular resources or technologies such as renewable energy systems solar energy hydropower hydrogen and fuel cells electric vehicles energy storage systems batteries digitalization smart grids blockchain and machine learning It also discusses the present energy transition in terms of broader policy and developmental perspectives Further it examines sustainable development the economics of energy and green growth and the role of various technologies and initiatives like renewables nuclear power and electrification in promoting energy security and energy transition worldwide

**Key Features** Includes technical economic social and policy perspectives of energy transitions Features practical case studies and comparative assessments Examines the latest renewable energy and low carbon technologies Explains the connection between energy transition and global climate change
