A Guide to the Genetics Collections of the American Philosophical Society Bentley Glass, 1988 A Guide to the Genetics Collections of the American Philosophical Society Bentley Glass, 1988 **A New Guide to the Collections in the Library of the American Philosophical Society** American Philosophical Society, J. Stephen Catlett, 1987 Rev ed of Guide to the archives and manuscript collections of the American Philosophical Society 1966 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1990 *Current Catalog* National Library of Medicine (U.S.), 1993 First multi year cumulation covers six years 1965 70 Moments of Truth in Genetic Medicine M. Susan Lindee, 2008-11-24 Genetic research increasingly dominates medical thought and practice in the United States and in many other industrialized nations Susan Lindee s original study explores the institutions disciplines and ideas that initiated the reconfiguration of genetic medicine from a marginal field in the mid 1950s to a core research frontier of biomedicine Tracing the work of geneticists and other experts in identifying and classifying disease during the explosive period between 1950 and 1980 Lindee identifies the individual moments of truth that moved the field away from its eugenic past to the center of a new world view in which nearly all disease is understood to be fundamentally genetic She suggests that these moments of truth were experienced not only by scientists but also by those who had familial intimate emotional knowledge of hereditary disease patients family members and research subjects Focusing on benchmarks in the field such as the rise of neonatal testing in the 1960s genetic studies of unique human populations such as the Amish the development of human cytogenetics and human behavioral genetics and the efforts to find genes for rare diseases such as familial dysautonomia she tracks the emergence of a biomedical consensus that nearly all disease is genetic disease Using the success of this field as a point of entry Lindee chronicles both the production of knowledge in biomedicine and changes in the cultural meaning of the body in the late twentieth century She suggests that scientific knowledge is a community project that is shaped directly by people in many different social and professional locations The power to experience and report scientific truth may be much more dispersed than it sometimes appears because people know things about their own bodies and their knowledge has often been incorporated into the technical infrastructure of genomic medicine Lindee s pathbreaking study shows the interdependence of technical and social parameters in contemporary biomedicine Bibliography of the History of Medicine , 1984

Bibliography of the History of Medicine National Library of Medicine (U.S.), 1990 **A Guide to Archives and Manuscript Collections in the History of Chemistry and Chemical Technology** Colleen Wickey, Center for History of Chemistry (U.S.), 1987 A thorough inventory of research resources in American repositories the Guide lists collections in the history of chemistry and chemical engineering the chemical and pharmaceutical industries and a number of related chemical process industries and businesses from personal and professional papers of chemical scientists and engineers to business records of the chemical process industries **Darwinian Myths** Edward Caudill, 2005-05-30 In *Darwinian Myths* Edward

Caudill examines the ability of Darwin's theory to inspire legends focusing particularly on the impact of social Darwinism on popular culture. This compelling testimony to the power of myth shows the ways in which over the years Darwin's ideas twisted, truncated, and misapplied have been appropriated by individuals, governments, and cultural elites to lend credibility to xenophobic, racist, and imperialist political movements and policies. Caudill uses newspaper and magazine accounts and correspondence to trace the myth making and promotional efforts of Darwin himself as well as the transformation of his empirically based theory into the philosophy of social Darwinism.

Shaping Biology Toby A. Appel, 2003-04-30
 Historians of the postwar transformation of science have focused largely on the physical sciences, especially the relation of science to the military funding agencies. In *Shaping Biology*, Toby A. Appel brings attention to the National Science Foundation and federal patronage of the biological sciences. Scientists, by training, NSF biologists hoped in the 1950s that the new agency would become the federal government's chief patron for basic research in biology, the only agency to fund the entire range of biology from molecules to natural history museums for its own sake. Appel traces how this vision emerged and developed over the next two and a half decades from the activities of NSF's Division of Biological and Medical Sciences, founded in 1952, through the cold war expansion of the 1950s and 1960s and the constraints of the Vietnam War era to its reorganization out of existence in 1975. This history of NSF highlights fundamental tensions in science policy that remain relevant today: the pull between basic and applied science; funding individuals versus funding departments or institutions; elitism versus distributive policies of funding; issues of red tape and accountability. In this NSF-funded study, Appel explores how the agency developed, how it worked, and what difference it made in shaping modern biology in the United States. Based on formerly untapped archival sources as well as on interviews of participants and building upon prior historical literature, *Shaping Biology* covers new ground and raises significant issues for further research on postwar biology and on federal funding of science in general.
