The Neurological Patient in History L. S. Jacyna, Stephen T. Casper, 2012

Parkinson's Alzheimer's Tourette's multiple sclerosis stroke all are neurological illnesses that create dysfunction distress and disability With their symptoms ranging from impaired movement and paralysis to hallucinations and dementia neurological patients present myriad puzzling disorders and medical challenges Throughout the nineteenth and twentieth centuries countless stories about neurological patients appeared in newspapers books medical papers and films Often the patients were romanticized indeed it was common for physicians to cast neurological patients in a grand performance allegedly giving audiences access to deep philosophical insights about the meaning of life and being Beyond these romanticized images however the neurological patient was difficult to diagnose Experiments often approached unethical realms and treatment created challenges for patients courts caregivers and even for patient advocacy organizations In this kaleidoscopic study the contributors illustrate how the neurological patient was constructed in history and came to occupy its role in Western culture Stephen T. Casper is Assistant Professor in Humanities and Social Sciences at Clarkson University L. Stephen Jacyna is reader in the History of Medicine and Director of the Centre for the History of Medicine at University College London

Smith,2023-01-17 Social psychiatry was a mid twentieth century approach to mental health that stressed the prevention of mental illness rather than its treatment Its proponents developed environmental explanations of mental health arguing that socioeconomic problems such as poverty inequality and social isolation were the underlying causes of mental illness The influence of social psychiatry contributed to the closure of psychiatric hospitals and the emergence of community mental health care during the 1960s By the 1980s however social psychiatry was in decline having lost ground to biological psychiatry and its emphasis on genetics neurology and psychopharmacology **The First Resort** is a history of the rise and fall of social psychiatry that also explores the lessons this largely forgotten movement has to offer today Matthew Smith examines four ambitious projects that investigated the relationship between socioeconomic factors and mental illness in Chicago New Haven New York City and Nova Scotia He contends that social psychiatry waned not because of flaws in its preventive approach to mental health but rather because the economic and political crises of the 1970s and the shift to the right during the 1980s foreclosed the social changes required to create a more mentally healthy society Smith also argues that social psychiatry provides timely insights about how progressive social policies such as a universal basic income can help stem rising rates of mental illness in the present day **Medical News and Abstract** ,1897 **Neuro** Nikolas

Rose,Joelle M. Abi-Rached,2013-02-24 The brain sciences are influencing our understanding of human behavior as never before from neuropsychiatry and neuroeconomics to neurotheology and neuroaesthetics Many now believe that the brain is what makes us human and it seems that neuroscientists are poised to become the new experts in the management of human conduct **Neuro** describes the key developments theoretical technological economic and biopolitical that have enabled the neurosciences to gain such traction outside the laboratory It explores the ways neurobiological conceptions of personhood are influencing everything from child rearing to criminal justice and are transforming the ways we know ourselves as human beings In this emerging neuro ontology we are not determined by our neurobiology on the contrary it appears that we can and should seek to improve ourselves by understanding and acting on our brains **Neuro** examines the implications of this emerging trend weighing the promises against the perils and evaluating some widely held concerns about a neurobiological colonization of the social and human sciences Despite identifying many exaggerated claims and premature promises **Neuro**
