Harris, 2014-12-18 Very little is known about the issue of wildlife conservation within China Even China specialists get a meager ration of stories about pandas giving birth in zoos or poachers in some remote setting being apprehended But what does the future hold for China's wildlife In this thoughtful work the leading U S expert on wildlife projects in Western China presents a multi faceted assessment of the topic Richard B Harris draws on twenty years of experience working in China and incorporates perspectives ranging from biology through Chinese history and tradition to interpret wildlife conservation issues in a cultural context In non technical language Harris shows that particularly in its vast western sections where most species of wildlife still have a chance to survive China has adopted a strongly preservationist hands off approach to wildlife without confronting the larger and more difficult problem of habitat loss This policy treats wildlife conservation as a strictly technical problem and thus prioritizes captive breeding to meet the demand for animal products while ignoring the manifold cultural social and economic dimensions that truly dictate how wild animals will fare in their interaction with the physical and human environments The author concludes that any successes this policy achieves will be temporary *Flowering Plants · Dicotyledons* Klaus Kubitzki, Jens G. Rohwer, Volker Bittrich, 1993-07-28 This volume the first of this series dealing with angiosperms comprises the treatments of 73 families representing three major blocks of the dicotyledons magnoliids centrosperms and hamamelids These blocks are generally recognized as subclasses in modern textbooks and works of reference We consider them a convenient means for structuring the hundreds of dicotyledon families but are far from taking them at face value for biological let alone mono phyletic entities Angiosperm taxa above the rank of family are little consolidated as is easily seen when comparing various modern classifications Genera and families in contrast are comparatively stable units and they are important in practical terms The genus is the taxon most frequently recognized as a

distinct entity even by the layman and generic names provide the key to all information available about plants. The family is as a rule homogeneous enough to conveniently summarize biological information yet comprehensive enough to avoid excessive redundancy. The emphasis in this series is therefore primarily on families and genera. Chinese Wildlife Martin Walters, 2008. An attractive handbook for wildlife enthusiasts visiting China covering all major animal groups and key sites for observation. Its full colour photographic format makes it an especially attractive souvenir.
