Mathematics Classrooms in Twelve Countries David Clarke, Christine Keitel, Yoshinori Shimizu, 2006 The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post lesson video stimulated interviews and by test and questionnaire data and copies of

student written material In each participating country data generation focuses on the classrooms of three teachers identified by the local mathematics education community as competent and situated in demographically different school communities within the one major city The large body of complex data supports both the characterisation of practice in the classrooms of competent teachers and the development of theory

Word Problems Stephen K. Reed,1998-12 Integrates work from cognitive psychology mathematics education and instructional technologies to inform readers of what is known about how people solve or fail to solve word problems and how this knowledge can improve instruction
