targets practitioners and focuses on the process of green architecture by combining concepts and technologies with best practices for each integral design component *Towards Sustainable Building* N. Maiellaro, 2013-03-14 This volume

contains the extended versions of selected papers presented at the first Mediterranean Conference Sharing Knowledge on Sustainable Building held at the Polytechnic of Bari in December 1999 supported by the National Research Council of Italy. The publication of this book was made possible through the efforts of the contributing Authors. Other people have provided invaluable support for the conference and for the preparation of this volume. In particular, I wish to thank Antonella Lerario for providing support in the final editing of the text and images. As reported in Boonstra and Rovers (2001), people spend a great deal of time inside buildings; therefore, decisions about design, construction, use, maintenance, renovation, demolition, reuse, and recycling of buildings have a huge impact on the sustainable development of our society. Technical aspects, however, should be supported by adequate policies developed with appropriate tools and driven by meaningful challenges. For people involved in sustainable buildings, the conceptual frameworks, studies, and experiences collected in this volume, organized into three parts: Policies, Tools, and Challenges, will help to advance knowledge, allowing them to adopt and more efficiently implement such innovations sooner.

Sustainable Practice for the Facilities Manager Sunil Shah, 2008-04-15

Sectors including offices, retail, and manufacturing. It explains the facilities manager's role in incorporating sustainability into the whole life cycle of a building, from initial briefing to final disposal. The book takes a structured approach: masterplanning and real estate acquisitions and disposals; design, construction, and commissioning; refurbishment, fit out, and project management; maintenance; operation; occupant satisfaction. Sustainable Practice for the Facilities Manager fills the gap between the policy-level sustainability books and the detailed technical documents by focusing on the what and how of planning and implementing sound environmental management practices in the context of FM operations. It covers policy and trends on global, European, and UK levels affecting businesses; compliance requirements for organisations, including some sector-specific areas; and best practice with good and bad case studies showing the business benefits of incorporating sustainable practice into day-to-day activities. The book is for facilities management professionals: public and private organisations, owners, property companies, institutional investors, building services, or supplier organisations, and will help you deliver an improved, operationally performing facility.

Sunil Shah, Technical Director and Head of Sustainability, Jacobs. Sunil has over eight years' consultancy experience within the built environment, reviewing lifecycle, environmental, and social impacts from facilities. He has experience in a number of sectors, providing strategic consultancy support for clients including GlaxoSmithKline, BP, BAA, HM Prison Service, Pfizer, and London Fire Brigade. Sunil has most recently been involved in supporting the inclusion of facilities management within the DTI's Sustainable Construction Strategy.

The Solar House Daniel D. Chiras, 2002-10-01 Passive solar heating and passive cooling approaches known as natural conditioning provide comfort throughout the year by reducing or eliminating the need for fossil fuel Yet while heat from sunlight and ventilation from breezes is free for the taking few modern architects or builders really understand the principles involved Now Dan Chiras author of the popular book *The Natural House* brings those principles up to date for a new generation of solar enthusiasts The techniques required to heat and cool a building passively have been used for thousands of years Early societies such as the Native American Anasazis and the ancient Greeks perfected designs that effectively exploited these natural processes The Greeks considered anyone who didn't use passive solar to heat a home to be a barbarian In the United States passive solar architecture experienced a major resurgence of interest in the 1970s in response to crippling oil embargoes With grand enthusiasm but with scant knowledge and sometimes little common sense architects and builders created a wide variety of solar homes Some worked pretty well but looked more like laboratories than houses Others performed poorly overheating in the summer because of excessive or misplaced windows and skylights and growing chilly in the colder months because of insufficient thermal mass and insulation and poor siting In *The Solar House* Dan Chiras sets the record straight on the vast potential for passive heating and cooling Acknowledging the good intentions of misguided solar designers in the past he highlights certain egregious and entirely avoidable errors More importantly Chiras explains in methodical detail how today's home builders can succeed with solar designs Now that energy efficiency measures including higher levels of insulation and multi layered glazing have become standard it is easier than ever before to create a comfortable and affordable passive solar house that will provide year round comfort in any climate Moreover since modern building materials and airtight construction methods sometimes result in air quality and even toxicity problems Chiras explains state of the art ventilation and filtering techniques that complement the ancient solar strategies of thermal mass and daylighting Chiras also explains the new diagnostic aids available in printed worksheet or software formats allowing readers to generate their own design schemes

Energy in America Ingrid Kelley, 2008 Scientists tell us we need to cut carbon emissions immediately to forestall effects of global warming Reducing fossil fuel use is the key and energy experts are hard at work devising solutions Engineers create remarkable clean energy technologies Energy policy analysts invent carbon credits and renewable portfolio standards Fossil energy industrialists promise new clean technology Renewable energy industrialists compete to develop the magic bullet for transportation fuel or power generation Every idea is designed to change the nation's energy sector to one that is clean and sustainable for the future But what is this energy sector we have and how did it come about Design professionals planners elected officials and community leaders are under tremendous pressure to find solutions to climate change They need a broader view of America's relationship with energy to gain perspective on how new ideas might work *Energy in America* tells this story emphasizing that energy use has always been based on cultural factors as well as

technology Energy in America relates how coal oil and natural gas built the nation from its beginning and created today s consumer culture It continues with the rise of the electric utility industry and its influence on American society Finally it explores the 1970s when America woke to conservation and efficiency and the renewable energy industries were born It concludes with a look at the future possibilities for community energy planning and current trends in sustainable energy policy The book features a comprehensive energy timeline from 1775 to the present Each chapter provides primary web sources and the book contains a complete index
