Rolim, 2003-06-26 This volume contains the proceedings from the workshops held in conjunction with the IEEE International Parallel and Distributed Processing Symposium IPDPS 2000 on 15 May 2000 in Cancun Mexico. The workshops provide a forum for bringing together researchers, practitioners and designers from various backgrounds to discuss the state of the art in parallelism. They focus on different aspects of parallelism from runtime systems to formal methods from optics to irregular problems from biology to networks of personal computers from embedded systems to programming environments. The following workshops are represented in this volume: Workshop on Personal Computer Based Networks of Workstations, Workshop on Advances in Parallel and Distributed Computational Models, Workshop on Parallel and Distributed Computing in Image, Video and Multimedia, Workshop on High Level Parallel Programming Models and Supportive Environment, Workshop on High Performance Data Mining, Workshop on Solving Irregularly Structured Problems in Parallel, Workshop on Java for Parallel and Distributed Computing, Workshop on Biologically Inspired Solutions to Parallel Processing Problems, Workshop on Parallel and Distributed Real Time Systems, Workshop on Embedded HPC Systems and Applications, Reconfigurable Architectures Workshop, Workshop on Formal Methods for Parallel Programming, Workshop on Optics and Computer Science, Workshop on Run Time Systems for Parallel Programming, Workshop on Fault Tolerant Parallel and Distributed Systems. All papers published in the workshops proceedings were selected by the program committee on the basis of referee reports. Each paper was reviewed by independent referees who judged the papers for originality, quality and consistency with the themes of the workshops. **Chinook Crash**

Steuart Campbell, 2004-08-04 The 1994 crash of Chinook with top Northern Ireland intelligence experts on board into the Mull of Kintyre has remained the source of intense speculation ever since. The book is not only a full account of the incident and the subsequent ongoing controversy over blame but also attempts to solve the mystery about this accident. After the accounts of those who witnessed the crash or communicated with the aircraft on its fateful journey, the book analyses the activities of the crew on the day in question, including the maintenance record and the behaviour of the aircraft. This book will largely justify the claim of the RAF hierarchy that the cause was gross negligence by the crew but not for the reason they give. *The Volatility Machine* Michael Pettis, 2001 This book presents a radically different argument for what has caused and likely will continue to cause the collapse of emerging market economies. Pettis combines the insights of economic history, economic theory and finance theory into a comprehensive model for understanding sovereign liability management and the causes of financial crises. He examines recent financial crises in emerging market countries along with the history of international lending since the 1820s to argue that the process of international lending is driven primarily by external events and not by local politics and/or economic policies. He draws out the corporate finance implications of this approach to argue that most of the current analyses of the recent financial crises suffered by Latin America, Asia and Russia have largely missed the point. He then develops a sovereign finance model analogous to corporate finance to understand the capital structure needs of emerging market countries. Using this model, he finally puts into perspective the recent crises a new sovereign

liability management theory the implications of the model for sovereign debt restructurings and the new financial architecture Bridging the gap between finance specialists and traders on the one hand and economists and policy makers on the other The Volatility Machine is critical reading for anyone interested in where the international economy is going over the next several years **Transactional Information Systems** Gerhard Weikum,Gottfried Vossen,2002 This book describes the theory algorithms and practical implementation techniques behind transaction processing in information technology systems **Seven Crashes** Harold James,2023-05-16 A leading economic historian presents a new history of financial crises showing how some led to greater globalization while others kept nations apart The eminent economic historian Harold James presents a new perspective on financial crises dividing them into good crises which ultimately expand markets and globalization and bad crises which result in a smaller less prosperous world Examining seven turning points in financial history from the depression of the 1840s through the Great Depression of the 1930s to the Covid 19 crisis James shows how crashes prompted by a lack of supply like the oil shortages of the 1970s lead to greater globalization as markets expand and producers innovate to increase supply By contrast crises triggered by a lack of demand such as the Global Financial Crisis of 2007 2008 result in less globalization as markets contract austerity measures are imposed and skepticism of government grows By considering not only the times but also the observers who shaped our understanding of each crisis from Karl Marx to John Maynard Keynes to Larry Summers James shows how the uneven course of globalization has led to new economic thinking and how understanding this history can help us better prepare for the future **Distributed Computing in Sensor Systems** Phil Gibbons,Tarek Abdelzaher,James Aspnes,Ramesh Rao,2006-06-11 This book constitutes the refereed proceedings of the Second International Conference on Distributed Computing in Sensor Systems DCOSS 2006 held in San Francisco California USA June 2006 The book presents 33 revised full papers focusing on distributed computing issues in large scale networked sensor systems Coverage includes topics such as distributed algorithms and applications programming support and middleware data aggregation and dissemination security information fusion lifetime maximization and localization **The New York Stock Exchange** Lucy Heckman,2020-11-25 First published in 1992 The New York Stock Exchange is an informative library resource The book begins with a history of the stock exchange and offers a series of annotated bibliographies devoted to dictionaries and general guides directories bibliographies general histories and statistical sources The book provides important coverage of the stock market crashes of 1929 and 1987 and the appendices offer a useful collection of data including a directory of serial publications listings of abstracts and indexes online databases and CD ROM products This book will be of interest to libraries and to researchers working in the field of economics and business **Surgeon General's Workshop on Drunk Driving** United States. Public Health Service. Office of the Surgeon General,1989 *Business India* ,1988-04 **Advances in Distributed Systems** Sacha Krakowiak,Santosh Shrivastava,2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS It was a

collaborative project involving research institutes and universities in Bologna Grenoble Lausanne Lisbon Rennes Rocquencourt Newcastle and Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety
