Organizing the Extended Enterprise Paul Schönsleben,Alfred Büchel,2013-06-05 For many years production management has no longer been confined to individual production facilities Intensive cooperation with suppliers has become an integral part of production management In recent years two further developments have gained ground On the one hand enterprises have been specialising and concentrating on their core competencies with outsourcing as a consequence on the other hand globalization has intensified the range of choice among suppliers Increased dependence on suppliers called for new forms of cooperative ventures Strategic and legal issues had to be considered and production management had to include sophisticated logistic chain management These developments have led to the concept of Extended Enterprise Among many

other topics this book discusses co operation between companies supply chain management agile and virtual management integration of the logistic chain and production and logistical strategies The book comprises the proceedings of the Working Conference on Organizing the Extended Enterprise sponsored by the International Federation for Information Processing IFIP which was held in Ascona Switzerland in September 1997 It will be of great importance to researchers managers and consultants in production logistics and information and other areas of organizational development Exploring Virtuality Within and Beyond Organizations N. Panteli,M. Chiasson,2008-05-09 In recent years there has been much interest in the virtual teams organizations and communities in management research and practice As technology and social practices change we have more opportunity to experience different forms of virtuality and in the process our understanding and conception of virtuality changes **In the converging information, communication and entertainment sector, which types of organisations and business ventures are suitable to form virtual corporations and why?** Christoph Schülner,1998-09-03 Inhaltsangabe Abstract In a virtual organisation connected by information technology independent firms join their complementary core competencies to achieve a common goal If those firms incorporate into a legal entity the virtual organisation which is a temporary concept transforms into a permanent virtual corporation Advantages potential drawbacks and organisational requirements of the virtual corporation are illustrated in the first part of this study However the virtual corporation is not just another chapter in the book of organisational theory but a strategic tool for companies to succeed in a particular market The industry which this study examines is the information communication and entertainment sector The sector is converging and industry structures change accordingly Therefore companies operating in it need to cope with the effects of a rapidly changing market environment As the virtual corporation promises to make firms more flexible it may hence provide a viable solution for those firms To asses if this assumption is true this study proposes that a firm must look at its industry environment its strategic objectives and its organisational capabilities Only if there is a corresponding fit between those three factors a firm is suited to become part of a virtual partnership A number interviews attempt to validate the above framework The result even though a final prove would have to be delivered through a more extensive survey or questionnaires the outcome of the interviews in principle corresponds to the theoretical findings These findings were that the virtual corporation will be a useful tool for a firm which operates in a market with a moderate level of risk and stable industry standards The firm adapts to the market and wants to seize business opportunities by placing selective bets to defend or extend its current competitive position Moreover the company has the general organisational capabilities needed for a virtual working environment and a specific core competence that adds value to the joint venture As these requirements especially the moderate level of market risk do not necessarily apply to the majority of firms from the information communication and entertainment sector one must conclude that the virtual corporation will not be a panacea The model however can be useful for service providers or for firms which operate in a relatively protected well defined *Teleworking* Paul J. Jackson,Jos M.

van der Wielen, 2002-01-31 Teleworking is an up to date groundbreaking and comprehensive assessment of teleworking It includes multidisciplinary contributions drawing on sociology management science economics philosophy and information technology analysis of post modern and post industrial theoretical contexts a selection of empirical studies from across the world accounts of different modes of teleworking from homeworking to centre based working examination of the links between teleworking and the virtual organisation Wide ranging detailed and original this book is a valuable introduction to teleworking and an important contribution to the debate on the future of the labour market **Theories of the Mobile Internet** Andrew Herman, Jan Hadlaw, Thom Swiss, 2014-11-27 This volume proposes the mobile Internet is best understood as a socio technical assemblage of objects practices symbolic representations experiences and affects Authors from a variety of disciplines discuss practices mediated through mobile communication including current phone and tablet devices The converging concepts of Materialities ranging from the political economy of communication to physical devices and Imaginaries including cultural values desires and perceptions are touchstones for each of the chapters in the book **The Financial Times Handbook of Management** Stuart Crainer, 1995 The most ambitious comprehensive and authoritative management solution ever published it brings together the latest management thinking from the best in the world *The Director* , 1995-08 *the journal of strategic information systems* , 1997
