Luckner, L. Nover, H. Böhm, 2013-06-29

1 Secondary Metabolism and Differentiation In addition to the primary metabolic reactions which are similar in all living beings formation and breakdown of nucleic acids and proteins as well as of their precursors of most carbohydrates of some carboxylic acids etc a vast number of metabolic pathways lead to the formation of compounds peculiar to a few species or even to a single chemical race only These reactions in accord with CZAPEK 1921 and PAECH 1950 are summed up under the term secondary metabolism and their products are called secondary metabolites The wide variety of secondary products formed in nature includes such well known groups as alkaloids antibiotics cardiac glycosides tannins saponins volatile oils and others A considerable number of them are of economic importance in therapeutics or technology Although secondary products are produced by micro organisms higher plants and animals cf LUCKNER 1972 most of the substances are found in the plant kingdom The lack of mechanisms for true excretion in higher plants may result in this unequal distribution the waste products of metabolism in plants instead being accumulated in the vacuoles the cell walls or in special excretory cells or spaces of the organism metabolic excretion cf FREY WYSSLING 1935 1970 MOTHES 1966a b 1972 LUCKNER et al 1976 Many secondary substances have however a direct biologic function They can be regulatory effectors e g **Biochemistry of cell differentiation** J. Mechanisms of Differentiation Paul B. Fisher, 1990-08-27 Significant recent advances in cell culture technology now permit a detailed biochemical and molecular analysis of differentiation in both normal and tumor cells These studies are important in attempting to understand the complex factors involved in normal growth and development as well as the abnormalities associated with carcinogenesis Mechanisms of Differentiation Volumes I and II is comprised of review chapters addressing various topics of current interest in this important area of research Topics discussed include genes controlling differentiation changes in gene expression during differentiation induction of differentiation induction of differentiation as a mode of action of chemotherapeutic agents and the effect of cell shape growth factors and differentiation modulating agents on the differentiated cell phenotype Mechanisms of Differentiation is valuable to researchers involved in differentiation and development carcinogenesis cell biology chemotherapy and immunology **Biochemistry of Cell Differentiation** John Paul, 1977 **The Biochemistry of Cytodifferentiation** Donald Ernest Samuel Truman, 1974 **Biochemistry of Cell Differentiation** Alberto Monroy, Rumen Tsanev, 1973 **Cell Surface and Differentiation** T. Muramatsu, 1990-06-30 Cell surface membranes contain a range of types of molecule of which proteins form a significant part and which play important roles in regulating cellular activities such as growth and differentiation In recent years considerable advances have been

made in the understanding of the structure and function of cell surface molecules partly stimulated by the development of recombinant DNA technologies This book provides a review of current knowledge of the molecular biology of the cell surface with particular emphasis on cell differentiation relating the molecular properties of the cell surface to developmental biology In addition to the central theme of cell differentiation cell surface markers which are useful in monitoring differentiation and cell adhesion molecules which influence differentiation are covered

Biochemistry of Differentiation and

Morphogenesis L. Jaenicke,2012-12-06 The topic of this Mosbach Colloquium was meant as a question to begin with When I started to study differentiation and morphogenesis in *Volvox* I hoped for a straightforward answer along prepared groove only to find out that also here things follow Murphy s Law they were much more complicated than expected Succour had to be sought Thus the idea arose to put this question before a board of experts Experience would have warned any ex service man never to utter an idea or else you would be made responsible and it came as it had to come I was made impressario of this gremium I had to assemble the experts These Proceedings contain their expertise I cannot even say that I biased it by my picking In the beginning I aimed at setting different accents by inclination and force of habit Then by trial and error by advice and declination the programme shaped itself It eventually gained momentum of which also the size of this volume is indicative In this volume are printed all the papers presented with two regret ted exceptions but not the sometimes lively discussion which clari fied and pruned here and there It would just have made the size too unwieldy Differentiation and morphogenesis start with the expression of genes The development programme reels off the genome and is regulated by the position of the appropriate genes Their structure is in the focus of gene biochemistry since the decisive tools have become available
