Molecular Biochemical Aspects of Cancer Undurti N. Das, 2020-05-30 This book discusses the role of genes oncogenes anti oncogenes free radicals PUFAs anti oxidants lipid peroxidation process telomere and angiogenesis on the origin of cancer cell proliferation and cancer in general It includes a broad introduction to cancer cells genes oncogenes and anti oncogenes and free radicals In later chapters it discusses in depth the relationship among free radicals lipid peroxidation and anti oxidants in cell proliferation It also discusses aerobic and anaerobic metabolism and their relationship to cancer as well as the Warburg effect and its potential in the development of new targets for cancer management Based on these and other evidences Molecular Biochemical Aspects of Cancer introduces a novel concept that suggests that selective enhancement of free radical generation in tumor cells could form a strategy to induce apoptosis of cancer cells employing bioactive lipids It presents a new method of treatment of cancer using in vitro in vivo and clinical data This book will interest oncologists scientists molecular biologists life scientists **Brain Tumors** K.J. Zülch, 2012-12-06 The third American edition has been completely revised and expanded although parts of the text of the second edition have been included I wish to acknowledge once again the excellent translation of the former two editions by Dr ALAN B ROTHBALLER and the late Dr JERZY OLSZEWSKI With this edition I have followed the general theme of the original German edition published in 1951 However I have tried to consider modern techniques and the many new publications on the subject of brain tumors Meanwhile an early desire of mine has been fulfilled by the completion and publication of a classification which can be

understood worldwide and hopefully be used widely namely the classification of the World Health Organization Histological Typing of Tumours of the Central Nervous System 1979 The classification which I used in the 1951 edition is very close to the final pattern of that accepted by the World Health Organization WHO since both follow the line of the BAILEY and CUSHING classification of 1926 1930 To consolidate our old concepts and experiences we have reclassified our collection of 9000 cases with the assistance of my co workers Dr M FUKUI Dr A SATO Dr E SCHARRER Dr E SIMON and Dr J SZYMAS In the last decade two large atlases have been published one called an Atlas of the Histology of Brain Tumors 1 in six languages and a second one called an Atlas of the Gross Neurosurgical Pathology 2
