**Biochemistry and Neurological Disease** Alan Nelson Davison, 1976-01-01      **Biochemical Aspects of Nervous Diseases** J. Cumings, 2012-12-06 Within recent years basic knowledge concerning the chemistry and the metabolic processes taking place in the brain spinal cord peripheral nerves and muscles has increased in a remarkable manner As a consequence some very important books have been published both in America and in Europe in which some at least of this information has become available in an easily readable form to an ever increasing group of laboratory and scientific workers The application of such studies in a variety of neurological diseases can now be made thus making possible an explanation of many of the clinical and pathological peculiarities that have been known for decades Although a few small manuals have already been published combining both biochemical and clinical aspects of such disorders and these have been studied by neurologists and chemical pathologists throughout the world yet a volume devoted exclusively to the biochemistry of neurological diseases has not yet been readily available The present volume is an attempt to remedy this omission in relation to just a few of the conditions Individual writers of each of the six chapters have been chosen who are intimately concerned both with biochemistry and with its application to disease in man Each author has been responsible for the accuracy of his chapter together with appropriate references from the literature but the Editor does not necessarily concur with all the opinions expressed by the authors      **Biochemical Mechanisms of Aluminium Induced Neurological Disorders** Touqeer

Ahmed, 2021-12-13 Aluminium is a chemical element present in earth's crust and it is a known environmental toxin which has been found to be associated with various neurological disorders Aluminium has been found to be a very strong risk factor for the development of Alzheimer's disease Biochemical Mechanisms of Aluminium Induced Neurological Disorders explains the association of aluminium with neurological disorders The book introduces the reader to sources of aluminium exposure followed by an explanation of pharmacokinetics of aluminium and the different biochemical pathways that cause neurological effects Chapters cover the typical mechanisms associated with aluminium neurotoxicity such as synaptic impairment as well as recent topics of interest such as the role of aluminium in impairing blood brain barrier functions Separate chapters which cover clinical evidence of aluminium toxicity and its management are also included in the book Biochemical Mechanisms of Aluminium Induced Neurological Disorders is a concise yet informative reference on the subject of aluminium neurotoxicity for all readers whether they are students of biochemistry pharmacology and toxicology clinical neurologists
