1st World Conference on Biomass for Energy and Industry Spyros Kyritsis, 2001 The 1st World Conference and Technology Exhibition on Biomass for Energy and Industry held in

Sevilla in June 2000 brought together for the first time the traditional European Conference on Biomass for Energy and Industry and the Biomass Conference of the Americas thus creating the largest and most outstanding event in the worldwide biomass sector. The conference elaborated innovative global strategies, projects and efficient practice rules for energy and the environment at a key stage in the industry's development. New concepts and projects were highlighted to increase the social and political awareness for a change in worldwide resource consumption and to promote economically, socially and environmentally sustainable development for the next millennium. In 2 volumes the Proceedings include some 470 papers essential to an understanding of current thinking, practice, research and global developments in the biomass sector, a vital reference source for researchers, manufacturers and policy makers involved or interested in the use of biomass for energy and industry.

Lignocellulose Biotechnology Ramesh Chander Kuhad, Ajay Singh, 2007. The agricultural and forestry processing wastes, lignocellulosics, are an important material resource and energy source. However, if untreated, they can pose a danger to the environment and potentially valuable resources. Microorganisms contribute significantly to solving the problem of biomass degradation, its recycling and conservation. In the recent years, an increasing interest shown by the textile, food, feed, pulp and paper industries in the microbial and enzymatic processes has triggered in-depth studies of lignocellulolytic microorganisms and their enzymes. Moreover, the advent of recombinant DNA technology in the late 1970s further paved the way for developing technologies based on lignocellulolytic microbes and enzymes. *Lignocellulose Biotechnology* presents a comprehensive review of the research directed towards environmentally friendly agricultural and forest by-products. The book comprises 22 chapters divided in four sections. It deals with a wide range of topics including biodiversity of lignocellulose-degrading microorganisms and their enzymes, molecular biology of biodegradation of lignin, characterization of lignocellulolytic enzymes, bioconversion of plant biomass to produce enzymes, animal feed, bioethanol and industrial applications of lignocellulolytic enzymes. The chapters dealing with industrial applications also address current biotechnological approaches in lignocellulose bioconversion to value-added products. This book is essential for students, researchers, scientists and engineers working in the fields of environmental microbiology, environmental biotechnology, life sciences, waste management and biomaterials.

Polysaccharides Severian Dumitriu, 2004-11-30. Completely revised and expanded to reflect the latest advancements in the field. *Polysaccharides: Structural Diversity and Functional Versatility*, Second Edition, outlines fundamental concepts in the structure, function, chemistry and stability of polysaccharides and reveals new analytical techniques and applications currently impacting the cosmetic, medicinal, chemical and biochemical industries. The authoritative book discusses polysaccharides utilized in medical applications such as polysaccharide-based hydrogels, polysialic acids, proteoglycans, glycolipids and anticoagulant polysaccharides, renewable resources for the production of various industrial chemicals and engineering plastics, polysaccharides and more.

Metabolic Engineering Jens Nielsen, 2003-07-03. Metabolic engineering is a rapidly evolving field that is being applied for the optimization of many

different industrial processes In this issue of Advances in Biochemical Engineering Biotechnology developments in different areas of metabolic engineering are reviewed The contributions discuss the application of metabolic engineering in the improvement of yield and productivity illustrated by amino acid production and the production of novel compounds in the production of polyketides and extension of the substrate range and in the engineering of *S cerevisiae* for xylose metabolism and the improvement of a complex biotransformation process
