Biocybernetics Of Vision Integrative Mechanisms And Cognitive Processes:

Biocybernetics Of Vision: Integrative Mechanisms And Cognitive Processes Cloe Taddei-ferretti, 1998-01-15 Visual cognition is an important area of biocybernetics It ranges from the filtering processes of early vision to the structural and functional organization of the visual centres as well as in higher animals to the neuronal plasticity the decision making rules the effect of noise the role of attention the ambiguity of patterns and the time dimension All these factors contribute to the cognitive interpretation of visual sensation that takes place in visual perception A side field is machine vision in which the signal processing known from animal vision is applied to the mobile robots responding to light stimulation **Vision** Carlo Musio, 2001 The light sense is conceivably the key sense in both the animal and the plant kingdom Vision research undoubtedly a fast growing field is providing impressive results OCo thanks to modern theoretical and methodological advances The approach of biophysics and neuroscience seems to be of great benefit and for this reason the present book gives an outline of recent acquisitions and updated advanced methods concerning this approach Visual mechanisms and processes are analysed at several molecular cellular integrative computational and cognitive levels by different methodologies from molecular biology to computation applied to different living models from protists to humans via invertebrates and lower vertebrates Contents The Optics of Animal Eyes M F Land Rhodopsin Like Proteins The Universal and Probably Unique Proteins for Vision P Gualtieri The Molecular Design of a Visual Cascade Molecular Stages of Phototransduction in Drosophila R Paulsen et al Molecular Changes During Primary Visual Pathway Development K L Moya et al Color Vision and Retinal Randomness of the Japanese Yellow Swallowtail Butterfly Papilio Xuthus K Arikawa et al Patch Clamping Solitary Visual Cells to Understand the Cellular Mechanisms of Invertebrate Phototransduction C Musio Phototransduction in Retinal Rods and Cones Y Koutalos et al Formation of OC ONOCO and OC OFFOCO Ganglion Cell Mosaics L M Chalupa Endogenous Nitric Oxide Modulates Signal Transmission from Photoreceptors to On Center Bipolar Cells in the Rabbit Retina B Lei Now You See It Now You Don t Shunting Inhibition in Early Vision L Borg Graham et al Visual Perceptual Learning N Berardi Functions of the Primate Temporal Lobe Cortical Visual Areas in Invariant Visual Object and Face Recognition E T Rolls Vector Code in Neuronal Networks E N Sokolov and other papers Readership Scientists and postdoctoral students in neurosciences biophysics and physiology **Biocybernetics of Vision** Cloe Taddei-Ferretti, 1997

Neuronal Bases and Psychological Aspects of Consciousness Cloe Taddei-Ferretti, 1999 For a few decades the puzzle of consciousness which for centuries was analysed by philosophers has been finding a wide interest in the scientific field where previously it was not entitled to be a member It has become one of the most debated problems in the cognitive sciences The anatomical bases neurophysiological correlates and elementary mechanisms underlying complex processes arising with consciousness have been compared with the psychological perceptive cognitive volitive emotional aspects of conscious expressions in normal and pathological conditions Various theories which attempt to fit systematically and coherently neural and psychological data have been debated proving the emergence of the phenomenon of consciousness

Macromolecular Interplay in Brain Associative Mechanisms Anna Neugebauer, 1998 This volume looks at the associative mechanisms of the brain particularly of the cortico limbic and diencephalic systems and also at the macromolecular effects on them by integrating the contributions of various disciplines converging on one subject and from different points of view It addresses the question of how so many different activity levels the biochemical physiological and psychological ones interact in integrative processes The topics treated include brain reverberating systems and associative phenomena long term potentiation learning and memory gene activity and brain activity and gene expression and information processing during sleep

Neuronal Processing of Optic Flow, 1999-12-06 When we walk drive a car or fly an airplane visual motion is used to control and guide our movement Optic flow describes the characteristic pattern of visual motion that arises in these situations This book is the first to take an in depth look at the neuronal processing strategies that underlie the brain's ability to analyze and use optic flow for the control of self motion It does so in a variety of species which use optic flow in different behavioral contexts The spectrum ranges from flying insects to birds higher mammals and man The contributions cover physiological and behavioral studies as well as computational models Neuronal Processing of Optic Flow provides an authoritative and comprehensive overview of the current state of research on this topic written by a group of authors who have made essential contributions to shaping this field of research over the last ten years Provides the first detailed overview of the analysis of complex visual motion patterns in the brain Includes physiological behavioral and computational aspects of optic flow processing Highlights similarities and differences between different animal species and behavioral tasks Covers human patients with visual motion deficits Enhances the reader's understanding with many illustrations

Emotions, Qualia, and Consciousness Alfred W. Kaszniak, 2001 The experience of emotion is a ubiquitous component of the stream of consciousness emotional qualia interact with other contents and processes of consciousness in complex ways Recent research has supported the hypothesis that important functional aspects of emotion can operate outside the conscious awareness Primary types of emotions are found in animals while secondary more complex types are involved in interpersonal

relationships Emotions both influence genetic repair mechanisms of individuals and are responsible for group behavior Many scholars and scientists believe that no scientific or philosophic account of consciousness can be complete without an understanding of the role of emotion Contents Emotion and Consciousness Current Research and Controversies A W Kaszniak The Nature of Typical Emotions A Ben Ze ev Emotions Associated to Cognitive Revision as a Basis for Values P Livet Neuro Affective Processes and the Brain Substrates of Emotion Emerging Perspective and Dilemmas J Pankseep Imagery and Emotion Information Networks in the Brain P J Lang Hemispheric Asymmetries in Representation and Control of Emotions Evidence from Unilateral Brain Damage G Gainotti Hierarchical Organization of Emotional Experience and Its Neural Substrates R Lane Mental Representations the Reticular Activating System and Emotions B Cabott Antecedents and Functions of Emotion Episodes N H Frijda The Communication of Emotion U Hess The Mental Representation of Romantic Jealousy A Blended Emotion and More D J Sharpsteen and other papers Readership Postdoctoral students and researchers in biocybernetics neurosciences cognitive sciences and psychology

Neuronal Coding of Perceptual Systems Werner Backhaus,2001 Neuronal coding of information coming from external and internal environments and transduced by sensory receptors constitutes a basic biophysical problem After the coding phase such information orients organism responses shaping complex behavioural patterns The characteristics of both neurons interneurons with re entering connections latency times filter bandwidth with respect to input signals logic operations on multiple convergent signals and neuron nets reverberating nets feedback feed forward connections oscillations due to endogenous activity patterns are important for coding mechanisms Neuronal coding is implied also in the higher phases of information processing linked to consciousness when neuronal activity patterns are related to perceptual mental representations

Biocybernetics of Vision Cloe Taddei-Ferretti,Istituto italiano per gli studi filosofici,Consiglio nazionale delle ricerche (Italy). Gruppo nazionale di cibernetica e biofisica,1997 Visual cognition is an important area of biocybernetics It ranges from the filtering processes of early vision to the structural and functional organization of the visual centres as well as in higher animals to the neuronal plasticity the decision making rules the effect of noise the role of attention the ambiguity of patterns and the time dimension All these factors contribute to the cognitive interpretation of visual sensation that takes place in visual perception A side field is machine vision in which the signal processing known from animal vision is applied to the mobile robots responding to light stimulation

Vision: Images, Signals And Neural Networks - Models Of Neural Processing In Visual Perception Jeanny Herault,2010-03-04 At the fascinating frontiers of neurobiology mathematics and psychophysics this book addresses the problem of human and computer vision on the basis of cognitive modeling After recalling the physics of light and its transformation through media and optics H rault presents the principles of the primate s visual system in terms of anatomy and functionality Then the neuronal circuitry of the retina is analyzed in terms of spatio temporal filtering This basic model is extended to the concept of neuromorphic circuits for motion processing and to the processing of color in the retina For more

in depth studies the adaptive non linear properties of the photoreceptors and of ganglion cells are addressed exhibiting all the power of the retinal pre processing of images as a system of information cleaning suitable for further cortical processing As a target of retinal information the primary visual area is presented as a bank of filters able to extract valuable descriptors of images suitable for categorization and recognition and also for local information extraction such as saliency and perspective All along the book many comparisons between the models and human perception are discussed as well as detailed applications to computer vision a
