Biodiversity Introduction 2nd:

Biodiversity : An Introduction, 2Nd Ed. Kevin J. Gaston, John I. Spicer, 2004-01-01 **BIODIVERSITY MAITI, PRABODH K., MAITI, PAULAMI, 2023-04-13** Biodiversity refers to the variety and variability of organisms. Diverse biota provide ecosystem service and goods on which the survival of man is dependent. However, the world today is under tremendous threat of unprecedented loss of biodiversity due to widespread habitat fragmentation, overexploitation, and global climate change. Consequently, environmental issues like global warming, pollution, recurrent natural calamities, and human population rise are of major concern to the conservationists. The book in its third edition covers a complete range of topics from the concept of biodiversity, its history, importance of species diversity, systematics, present status of bioresources, and pattern of distribution of global species to the genetic diversity and ecosystem diversity. It also elaborates on various drivers that lead to biodiversity loss and the impact on global climate change on biota. Moreover, the topics on biopiracy, environmental laws and policies, and the importance of indigenous knowledge of indigenous communities are also described in the text. The use of biotechnology-based methods and various measures to preserve natural resources are highlighted in the text. An all-inclusive book provides a detailed account of the conservation measures of biodiversity and proves to be the most comprehensive text encompassing both principles and applications of biodiversity. The book is primarily designed for the undergraduate and postgraduate students of Environmental Science, Zoology, and Botany. Besides, it will also be of immense value to the students pursuing postgraduate diploma or other professional courses in Environmental Science and aspirants of various competitive examinations. **NEW TO THE THIRD EDITION** Various sections are revised and updated throughout the book. Includes detailed discussion on protected areas, sacred groves, habitat fragmentation, and its effect on ecosystem functioning, metapopulation, invasive species, and wildlife corridors. Introduces the concept of ecological restoration and the system of Biodiversity Governance in India. Provides a number of new and replaced figures for better illustration and understanding of the subject. **KEY FEATURES** Explains the contemporary topics such as green accounting and sustainable management of natural resources in an easy-to-understand manner. Incorporates a number of photographs, flow charts, diagrams, and tables. Provides chapter-end review questions to help students check their understanding of the subject. Includes MCQs with answers appended at the end of the book. Gives an elaborate glossary of technical terms to acquaint the students with the related terminologies. **TARGET AUDIENCE** B Sc Environmental Science, Zoology, and Botany; M Sc Environmental Science, Zoology, and Botany; PG Diploma in Biodiversity Conservation, Environmental Science. **Ecology & Environment for General Studies CSAT - Paper 1 IAS Prelims 2nd Edition** Disha Experts, Ecology and Environment General Studies CSAT Paper 1 IAS Prelims for Civil Services Preliminary Exam covers various chapters and their important topics. The book is divided into 17 chapters followed by 2 levels of exercises: Simple MCQs, statement-based MCQs. The book captures most of the important questions with explanations of the past 12 years of the IAS Prelim exam distributed in the various chapters. *Biodiversity*

Loss Assessment for Ecosystem Protection Rathoure, Ashok Kumar, 2024-05-29 In an era defined by relentless human activities and rapid ecological transformations the world faces an escalating crisis the precipitous loss of biodiversity As we grapple with the consequences of industrialization urbanization and unchecked developmental pursuits the very fabric of life on Earth is unraveling Biodiversity encompassing the myriad species their genetic variations and the intricate interplay within ecosystems is diminishing at an unprecedented pace This decline termed biodiversity loss extends beyond a mere statistical measure it reflects the unraveling of the intricate tapestry that sustains life on our planet In the face of climate change pollution habitat loss overexploitation of species and the invasion of non native species the urgency to address biodiversity loss has never been more critical It is against this backdrop that this book emerges titled Biodiversity Loss Assessment for Ecosystem Protection This groundbreaking work not only unveils the theoretical frameworks surrounding biodiversity conservation but also presents the latest empirical research findings making it an indispensable tool for professionals across diverse disciplines From stress on biodiversity and impact assessment to innovative approaches for studying terrestrial aquatic and marine components each chapter provides a deep dive into specific facets of biodiversity loss The objective is clear to equip scholars with the knowledge they need to contribute meaningfully to the preservation of our planet s rich biological heritage

From Assessing to Conserving Biodiversity Elena Casetta, Jorge Marques da Silva, Davide Vecchi, 2019-06-17 This open access book features essays written by philosophers biologists ecologists and conservation scientists facing the current biodiversity crisis Despite increasing communication accelerating policy and management responses and notwithstanding

improving ecosystem assessment and endangered species knowledge conserving biodiversity continues to be more a concern than an accomplished task Why is it so The overexploitation of natural resources by our species is a frequently recognised factor while the short term economic interests of governments and stakeholders typically clash with the burdens that implementing conservation actions imply But this is not the whole story This book develops a different perspective on the problem by exploring the conceptual challenges and practical defiance posed by conserving biodiversity namely on the one hand the difficulties in defining what biodiversity is and characterizing that thing to which the word biodiversity refers to on the other hand the reasons why assessing biodiversity and putting in place effective conservation actions is arduous

Spicer, 2013-04-22 This concise introductory text provides a complete overview of biodiversity what it is how it arose its distribution why it is important human impact upon it and what should be done to maintain it Timely overview of the serious attempts made to quantify and describe biodiversity in a scientific way Acts as an easy entry point into the primary literature Provides real world examples of key issues including illustrations of major temporal and spatial patterns in biodiversity Designed primarily with undergraduate students and course lecturers in mind it will also be of interest to anyone who requires an overview of and entry to the vast literature on these topics The figures from in the book may be freely downloaded from the book website on wiley com **Biodiversity Enrichment in a**

Diverse World Gbolagade Akeem Lameed, 2012-08-29 This book Biodiversity Enrichment in a Diverse World considered biodiversity plants animals fungi and microbes from three different angles genetics species and ecosystems The relationships between them are complex and it looks at these aspects from different angles and also various interventions at different levels The scientific approach of the book demonstrates that the three levels are closely inter connected and action is therefore needed to conserve and protect the systems if the benefits provided to human life will continue to be available However conservation of the biological diversity is essentially an umbrella term for traditional species relationship to human health ecosystem conservation and the need to manage the human use of the species and ecosystems in a sustainable way

Conservation Biology for All Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-07 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conservation and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources
