Soil Quality and Biofuel Production Rattan Lal, B.A. Stewart, 2009-12-17. From its humble beginning in the late 19th century when Henry Ford's first car was designed to run on ethanol, biofuel production has been on the rise, with more than 26 billion liters produced in the U.S. in 2007. Ethanol made from biomass rather than grains holds great promise, including numerous economic and environmental benefits. However, the adverse interactions of energy, climate, food, and soil quality cannot be ignored. In eight concise chapters, *Soil Quality and Biofuel Production* presents a state-of-the-knowledge review of soil properties and processes negatively impacted by crop residue removal. It outlines the ecological consequences of biofuels and evaluates land use in the production of raw material for biofuel. The book then spotlights pressing issues related to corn and cellulosic ethanol and also soil erosion. It offers advice for achieving economic balance in the competition for arable land.
