Genetics and the Law II Milunsky,2013-11-11 The law is a mandate and a mirror it both commands and reflects It

should not come as a shock that scientists and physicians often prefer the mirror at times when society seems to be demanding a mandate This may be especially true in the rapidly advancing field of medical genetics where recent discoveries leading to potentially startling applications have raised old questions of law in a new light Nevertheless we believe that in general the conflict between the law and science as illustrated in the field of genetics is embroiled with exaggeration The Chief Justice of the United States Supreme Court Warren Burger has noted that the prime function of the law is to protect basic human values individual human values sometimes even at the expense of scientific progress and that it is not the function of the law to keep pace with science While both of these statements are true as far as they go we believe the law

must make an affirmative effort to anticipate scientific developments so that those beneficial to society can be nurtured rather than stultified It was to nurture cooperation and understanding that we brought together a distinguished faculty of internationally known experts on law and genetics to discuss their fields in 1975 Themelios, Volume 36, Issue 2 D.
