Biofluid And Tissue Analysis For Drugs Including Hypolipidaemics Including Hypolipidaemics:

Biofluid and Tissue Analysis for Drugs, Including Hypolipidaemics Eric Reid, Howard M. Hill, Ian D. Wilson, 1994 This book reviews drug development methodology and associated problems with particular reference to the analysis of biofluids and tissues

The Analysis of Drugs in Biological Fluids Joseph Chamberlain, 2018-02-06 This new edition focuses on a variety of techniques available for the analysis of drugs in biological fluids Over 150 figures and tables help to describe the latest advances and give examples of their applications Current chiral analysis methods as well as discussions on the impact of chirality are described Practical aspects of bioanalytical work including many examples of laboratory problems not often reported in the scientific literature are examined in depth

NMR Spectroscopy in Drug Development and Analysis Ulrike Holzgrabe, Iwona Wawer, Bernd Diehl, 2008-07-11 Since the development of the NMR spectrometer in the 1950s NMR spectra have been widely used for the elucidation of the 2D structure of newly synthesized and natural compounds In the 1980s the high resolution NMR spectrometer 300 Mhz and 2D experiments were introduced which opens up the possibility to determine the 3D structure of large molecules especially biomolecules However NMR spectroscopy has been rarely applied to drug analysis This book illustrates the power and versatility of NMR spectroscopy in the determination of impurities in and the content of drugs the composition of polymer excipients the characterization of isomeric drug mixtures the complexity of drugs with small size components or ions and the behavior of drugs in acid and basic solution In addition NMR spectroscopy and especially the hyphenated technique with HPLC is shown to be a powerful tool to measure a drug and its metabolites in various body fluids The solid state NMR technique can give information on the structure especially the conformation of drugs and excipients in drug formulations Recently SAR by NMR introduced by Fesik impressively demonstrated the potential of NMR spectroscopy in drug development and in the characterization of the interaction between large molecules and ligands The complexation between proteins lipids and cyclodextrins with drugs is described Finally NMR imaging MRI and MRS can be used to characterize the liberation of drugs from a drug formulation Furthermore the distribution of substances in plants in animals in tissues and in humans can be visualized by imaging In short this book covers all aspects of drug analysis
