Biograffiti A Natural Selection:

Biograffiti John McLauren Burns, 1975 **Headless Males Make Great Lovers** Marty Crump, 2024-05-31 The natural world is filled with diverse not to mention quirky and odd animal behaviors Consider the male praying mantis that continues to mate after being beheaded the spiders insects and birds that offer gifts of food in return for sex the male hip pocket frog that carries his own tadpoles the baby spiders that dine on their mother the beetle that craves excrement or the starfish that sheds an arm or two to escape a predator's grasp *Headless Males Make Great Lovers* and *Other Unusual Natural Histories* celebrates the extraordinary world of animals with essays on curious creatures and their amazing behaviors In five thematic chapters Marty Crump a tropical field biologist well known for her work with the reproductive behavior of amphibians examines the bizarre conduct of animals as they mate parent feed defend themselves and communicate Crump's enthusiasm for the unusual behaviors she describes from sex change and free love in sponges to aphrodisiac concoctions in bats is visible on every page thanks to her skilled storytelling which makes even sea slugs dung beetles ticks and tapeworms fascinating and appealing Steeped in biology *Headless Males Make Great Lovers* points out that diverse and unrelated animals often share seemingly bizarre behaviors evidence Crump argues that these natural histories though outwardly weird are successful ways of living Illustrated throughout and filled with vignettes of personal and scientific interest *Headless Males Make Great Lovers* will enchant the general reader with its tales of blood squirting horned lizards and intestine ejecting sea cucumbers all in the service of a greater appreciation of the diversity of the natural histories of animals *Carabid Beetles* T.L.

Gissis, Ehud Lamm, Ayelet Shavit, 2018-01-12 Broad perspective on collectivity in the life sciences from microorganisms to human consensus and the theoretical and empirical opportunities and challenges Many researchers and scholars in the life sciences have become increasingly critical of the traditional methodological focus on the individual This volume counters such methodological individualism by exploring recent and influential work in the life sciences that utilizes notions of collectivity sociality rich interactions and emergent phenomena as essential explanatory tools to handle numerous persistent scientific questions in the life sciences The contributors consider case studies of collectivity that range from microorganisms to human consensus discussing theoretical and empirical challenges and the innovative methods and solutions scientists have devised The contributors offer historical philosophical and biological perspectives on collectivity and describe collective phenomena seen in insects the immune system communication and human collectivity with examples ranging from cooperative transport in the longhorn crazy ant to the evolution of autobiographical memory They examine ways of explaining collectivity including case studies and modeling approaches and explore collectivity's explanatory power They present a comprehensive look at a specific case of collectivity the Holobiont notion the idea of a

multi species collective a host and diverse microorganisms and the hologenome theory which posits that the holobiont and its hologenome are a unit of adaption The volume concludes with reflections on the work of the late physicist Eshel Ben Jacob pioneer in the study of collective phenomena in living systems Contributors Oren Bader John Beatty Dinah R Davison Daniel Dor Ofer Feinerman Raghavendra Gadagkar Scott F Gilbert Snait B Gissis Deborah M Gordon James Griesemer Zachariah I Grochau Wright Erik R Hanschen Eva Jablonka Mohit Kumar Jolly Anat Kolumbus Ehud Lamm Herbert Levine Arnon Levy Xue Fei Li Elisabeth A Lloyd Yael Lubin Eva Maria Luef Ehud Meron Richard E Michod Samir Okasha Simone Pika Joan Roughgarden Eugene Rosenberg Ayelet Shavit Yael Silver Alfred I Tauber Ilana Zilber Rosenberg *The Life of a Leaf* Steven Vogel, 2012-10-01 In its essence science is a way of looking at and thinking about the world In *The Life of a Leaf* Steven Vogel illuminates this approach using the humble leaf as a model Whether plant or person every organism must contend with its immediate physical environment a world that both limits what organisms can do and offers innumerable opportunities for evolving fascinating ways of challenging those limits Here Vogel explains these interactions examining through the example of the leaf the extraordinary designs that enable life to adapt to its physical world In Vogel's account the leaf serves as a biological everyman an ordinary and ubiquitous living thing that nonetheless speaks volumes about our environment as well as its own Thus in exploring the leaf's world Vogel simultaneously explores our own A companion website with demonstrations and teaching tools can be found here <http://www.press.uchicago.edu/sites/vogel/index.html>

destruction increased winter storms and lack of milkweed the last one a theory that the author rejects He evaluates the current sustainability of monarchs and reveals a novel explanation for their plummeting numbers Lavishly illustrated with more than eighty color photos and images Monarchs and Milkweed takes readers on an unforgettable exploration of one of nature's most important and sophisticated evolutionary relationships *Horns, Tusks, and Flippers* Donald R.
