**Biohydrometallurgy** Patricia Faleiro Pimentel, 2003      **Biohydrometallurgy**, 2003      *Biohydrometallurgy* Giovanni Rossi, 1990      **Biomining Technologies** David Barrie Johnson, Christopher George Bryan, Michael Schlömann, Francisco Figueroa Roberto, 2022-11-14 This book describes emerging and established industrial processes of biomining technologies used for the recovery of metals of economic interest from e.g. mineral ores mining and electronic wastes using microbiological technologies. Multiple chapters focus on engineering design and operation of biomining systems. Several industrial case studies from China, Chile, Peru, Russia, Kazakhstan and Finland are included which emphasises the practical approach of the book. The reader not only learns more about the biology, diversity and ecology of microorganisms involved in biomining processes but also about microbial biomolecular and cultivation tools used in the biomining industry. Special emphasis is put on emerging biotechnologies enabling the use of biomining for recycling metals from e-wastes, waste streams and process waters. Finally, the future impacts and direction of biomining towards sustainability in a metal-demanding world are also highlighted. The book is aimed at an interdisciplinary audience involving operators and researchers working across disciplines including geology, chemical engineering, microbiology and molecular biology. This is reflected by the content of this book as well as by its authors who are all leading practitioners and authorities in their fields.      **Treatise on Process Metallurgy** Seshadri Seetharaman, Alexander McLean, Roderick Guthrie, Sridhar Seetharaman, 2025-06-09 Treatise on Process Metallurgy Volume 5 Energy Environment and Future Aspects of Process Metallurgy Second Edition is divided into two parts with the first covering sustainable development as it pertains to process metallurgy addressing issues arising from sustained economic growth, long-term mineral and metal supply and energy requirements in metallurgical industries. It also examines energy resources including fossil and renewable sources and discusses the resource efficiency of the circular economy through simulation-based analyses. The second part delves into the future of metals production globally with a focus on raw material and energy availability. It presents current CO<sub>2</sub> emissions and future projections with emphasis on reducing CO<sub>2</sub> generation in steelmaking technologies. Additional topics discussed include flash smelting, FINEX process outlook, the rotary hearth furnace and an extensive coverage of hydrogen steelmaking. Covers sustainable development of metals insight on their current and forecast supply and demand, emissions reduction and use of energy in the metallurgical industry and more. Features simulation-based analysis of the resource efficiency of the circular economy and the enabling role of metallurgical infrastructure as a part of recycling with reference to slags, utilization of metallurgical scrap form and more. Discusses the future outlook of metal production with particular attention paid to raw materials, energy availability, CO<sub>2</sub> emissions, flash smelting, rotary hearth furnaces and hydrogen steelmaking.      **Biohydrometallurgy: Bioleaching, microbiology, and molecular biology** V.
