**BIOLOGIC & BIOPROSTHETIC VALVES** Endre Bodnar, 1986-04-01      Biological Fluid-Surface Interactions in Detection and Medical Devices Michael Thompson, Christophe Blaszykowski, Sonia Sheikh, Cesar Rodriguez-Emmenegger, Andres de los Santos Pereira, 2017 This book examines the interactions between implants and biological fluids that cause fouling in biosensors and the serious issue of thrombus formation suitable for professional researchers in academia and industry and postgraduate students      *The Pathology of Devices* Colin L. Berry, 2012-12-06 Increasingly pathologists are being confronted with the effects of a number of complex devices on the body Cardiac pace makers are becoming increasingly sophisticated ventricular support systems for the heart are well established and vascular and other prostheses are being used in increasing numbers New joint systems contraceptive devices used as drug delivery systems and the use of new cement materials all provide challenges in terms of their pathology The articles in this text collectively form a body of information on these devices not available elsewhere and with an up to date bibliography

**Cardiac Reconstructions with Allograft Tissues** Richard A. Hopkins, 2005-11-12 Cryopreserved allograft tissues are now standard materials for the reconstructive cardiac surgeon Since publication of the first edition Cardiac Reconstructions with Allograft Valves in 1989 the field has progressed dramatically with increased clinical use of cardiovascular allograft tissues with the development of new surgical techniques and with advances in the understanding of the fundamentals of valve transplantation biology and cryopreservation As a result over two thirds of the present volume represents new material Fifty six authors bring their expertise to thirteen comprehensive lavishly illustrated sections which discuss the principles of the use of homograft valves major clinical series of homograft valves for both left and right ventricular outflow tracts cryopreserved allograft tissue for cardiac reconstruction cell biology of heart valve leaflets cryobiology of heart valve preservation morphological biochemical and explant pathology studies of allograft heart valves allograft valve banking as well as detailed explanation of surgical techniques for valve and root methods for left and right ventricular outflow tract reconstructions the Ross operation and variants and complex reconstructions A final section presents potential future directions for the field Over 400 illustrations created expressly for this book depict the surgical techniques from the perspective of the surgeon standing at the operating table All surgeons performing pediatric and or adult valve replacements and reconstructive cardiac surgeries will benefit from the described methods Cardiothoracic residents and cardiologists will also find the text useful It will provide the surgeon with an enhanced understanding of the biological and material properties of allografts and increased familiarity with the range of surgical techniques applicable for the use of these valves particularly in the successful management of challenging cardiac reconstructions      **Cardiac Reconstructions with Allograft Valves** Richard A. Hopkins, 2012-12-06 A major need of all cardiologists and surgeons involved with the application of allograft tissue to cardiac surgical reconstructions is met by this unique atlas Step by step it carefully describes the procedures involved in

acquiring sterilizing and cryo preserving allograft valves as well as the surgical technique used in left and right ventricular outflow tract reconstructions All of the information needed to perform the reconstructions is given including relevant references and applicable variations in method Excellent illustrations accompany the description of surgical technique All of the techniques are based on classic approaches but assimilate the authors modifications arrived at through vast experience The wealth of references illustrations and expertise in this volume make it a valuable asset for all cardiac surgeons

Cardiac Valve Allografts 1962-1987 A.C. Yankah,R. Hetzer,C. Miller,D.N. Ross,J. Somerville,M.H. Yacoub,2012-12-06 It was the genius of Gordon Murray in Toronto that introduced the use of allografts into cardiac surgery in the 1950s Soon after this on opposite sides of the world Sir Brian Barratt Boyes in Auckland New Zealand and Mr Donald Ross in London undertook to use allografts for the replacement of diseased aortic valves Since that time the global interest in allografts has been patchy episodic and without a consensus Nonetheless for the last 20 years at least three groups in the world have steadfastly pursued the development of new and relevant information concerning the use of allograft valves in humans These are the centres of Sir Brian Barratt Boyes Mr Donald Ross and Mark O'Brien in Brisbane More recently talented investigators including Drs Yankah Yacoub and others have been developing information concerning the immunological aspects of the use of allografts as well as their clinical use No doubt at present cardiac valve allografts of one sort or another are the devices of choice for conduits and have an important place in the surgery of aortic valve replacement Even so in the mind of this writer at least the future usefulness of allografts for the replacement of diseased cardiac valves and conduits between a ventricle and the pulmonary artery remains problematic and depends upon improvements in other devices for this purpose and upon improvements that may be made in preparing and using allografts
