The Neurobiology of Addiction Trevor W. Robbins, Barry J. Everitt, David J. Nutt, 2010 In the past two decades there have been astonishing advances in our understanding of the neurobiological basis and nature of drug addiction We now know the initial molecular sites of action at identified receptors of virtually all of the major drugs of abuse including cocaine heroin and amphetamine as well as legal drugs such as nicotine and alcohol We also understand the main components of a reward system and its connections to major brain regions involved in motivation and emotion such as the amygdala hippocampus and prefrontal cortex The Neurobiology

of Addiction describes the latest advances in our understanding of addiction It brings together world class researchers to debate the nature and extent of addiction as well as its causes consequences and treatment The focus of the book is on the brain processes underlying addiction in terms of neural systems neurochemical basis and molecular changes Several types of addiction are discussed ranging from illicit drugs cocaine amphetamine and heroin to legal drugs alcohol and nicotine In addition it explores increasingly common behavioural addictions such as gambling and obesity Included are chapters on vulnerability to addiction genetic factors opponent motivational processes animal models relapse cognitive deficits associated with drug abuse new pharmacological treatments and current controversies concerning different neuropsychological theories of addiction Throughout it reports on cutting edge research using brain imaging and state of the art molecular methodology The book will make fascinating reading for students and teachers in the field of neuroscience pharmacology and psychology as well as experts in the field

Biological Basis of Substance Abuse Stanley G. Korenman, Jack D. Barchas, 1993 This volume describes our current understanding of the biological mechanisms in the central nervous system of nicotine alcohol cocaine heroin marijuana and other drugs of abuse Organized to focus on the similarities rather than the differences between drug actions the processes undergo examination by level of cellular organization rather than by substance The book proceeds from characterization of drug effects in relation to neurotransmitters and their receptors through localization of drug effects in the brain in relation to specific anatomic structures The impact of local stimulation or lesions on animal behaviors with respect to reward reinforcement desensitization and sensitization receive attention Human genetic studies and therapeutic trials of addiction management complete the presentations
