*Carcinogenesis* Michael P Waalkes, Jerrold M. Ward, 1994-06-30 Carcinogens like chemicals with other toxic hazards often produce adverse effects only in specific organs or tissues The factors determining whether a chemical induces cancer in an organ range from simple toxicokinetics to complex phenomena such as expression or lack of expression of specific genes This volume examines the site specific factor

**Interpretation and Extrapolation of Chemical and Biological Carcinogenicity Data to Establish Human Safety Standards** H.C. Grice, 2012-12-06 The International Life Sciences Institute ILSI is a scientific foundation which addresses critical health and safety issues of national and international concern ILSI promotes international cooperation by providing the mechanism for scientists from government industry and universities to work together on cooperative programs to generate and disseminate scientific data The members and trustees of the Institute believe that questions regarding health and safety are best resolved when scientists can examine and discuss issues as an independent body separate from the political pressures of individual countries and the economic concerns of individual companies Frequently meaningful assessment of the risk of a test substance is hindered by the inherent inconsistencies in the system The development and refinement of methods and systems to evaluate the safety of chemicals have evolved in a rapid and largely unplanned fashion Attempts to improve the system have largely been directed toward broad general concerns with little attention being given to specific problems or issues A failure to resolve these problems has frequently resulted in increased testing costs and complications in the assessment and extrapolation of the results Publicity surrounding toxicologic issues has created chronic public apprehension about the ability of science and government to deal effectively with these problems In response to these difficulties ILSI has assembled highly qualified and renowned scientists from research institutes universities government and industry with relevant scientific knowledge and expertise regarding the issues that complicate risk assessment procedures
