Biological Effects Of 224Ra Benefit And Risk Of Therapeutic Application:

Biological Effects of 224Ra W.A. Müller, H.G. Ebert, 2012-12-06 Under an association contract linking the Commission of the European Communities and the Gesellschaft für Strahlen und Umweltforschung mbH a research programme on the pathogenesis of somatic radiation damage has been under way for a number of years. Experimental research on long term radiation effects following the incorporation of bone seeking radionuclides and an epidemiological study of the consequences for patients treated with 224Ra for therapeutical reasons have been among the main features of the work. The research carried out on tumor induction in the low dose range and for low dose rates is particularly important as regards assessing the radiation hazard to man. The second Symposium on the biological effects of 224Ra held at Neuherberg provided a welcome opportunity to take stock of what has been achieved so far and to discuss the own research efforts in an international setting. The discussions focussed on two topical aspects of radiation protection. One aspect was the long term effects of high LET ionizing radiations on man and the quantitative data involved in risk assessment at low doses. The epidemiological studies and experimental research carried out under the association contract should provide facts and figures for an objective assessment of the radiation hazards from incorporated radio nuclides which is one of the fundamental and controversial problems of the nuclear energy debate. Biological Effects of 224Ra. Benefit and Risk of Therapeutic Application, 1978. **Metals in Bone** Nicholas D. Priest, 2012-12-06 In 1980 the Internal Emitters Committee of EULEP organised a symposium in Rotterdam on Bone and Bone Seeking Radionuclides Their Physiology Dosimetry and Effects. The speakers for this meeting mostly from EULEP associated laboratories were chosen to review this field of scientific research mostly for the benefit of interested scientists who were not actively researching with bone seeking radionuclides. This meeting was a success and its proceedings were subsequently published in the form of a book by the Commission of the European Communities reflecting the great importance that both EULEP and the Radiological Protection Programme of the Commission of the European Communities attaches to the study of radionuclides that deposit in bone. The Metals in Bone symposium in Angers was intended to serve a different function from that of the meeting held in Rotterdam in that while these proceedings will certainly be of interest to non involved scientists the meeting was intended to be of most benefit to those actively researching the metabolism and effects of bone seeking metals. Moreover in an attempt to increase the value of its discussions and the number of interested and participating scientists the remit of the meeting was broader and set to include papers on stable as well as radioactive metals. **Biological Effects of Low-level Radiation** International Atomic Energy Agency, 1983. **BIOLOGICAL EFFECTS OF 224Ra: BENEFIT AND RISK OF THERAPEUTIC APPLICATION- PAPERS PRESENTED- 2ND SYMPOSIUM- COMMISSION OF THE EUROPEAN COMMUNITIES, DIRECTORATE-GENERAL RESEARCH,**
