Biological Effects of Power Frequency Electric and Magnetic Fields Indira Nair, Millett Granger Morgan, H. Keith Biological Effects of Power Frequency Electric and Magnetic Fields Office of Technology Assessment United Florig, 1989 S,2002-06 This report was prepared by the Office of Technology Assessment of the United States Congress to review the health effects of high voltage transmission lines For about two decades there has been some concern about the health effects of electric and magnetic fields produced by transmission lines Recent studies have heightened this concern Health effects research is still preliminary and inconclusive but a growing number of studies suggest that under certain circumstances even relatively weak electric and magnetic fields can produce biologic changes This report discusses the present state of knowledge on the health effects of low frequency electric and magnetic fields and describes current U S funding levels and research programs Also the report provides information on regulatory activity including existing and proposed field exposure standards Biological effects of power frequency electric and magnetic fields, 1989 **Biological Effects of Power** Frequency Electric and Magnetic Fields Indira Nair, Millett Granger Morgan, H. Keith Florig, 1989 Biological Effects of Power Frequency Electric and Magnetic Fields ,1989 Electric and magnetic fields produced by electric power systems have recently been added to the list of environmental agents that are a potential threat to public health This paper describes peoples exposures to fields from power systems and other sources reviews existing scientific evidence on the biological effects of these fields presents a history of research support and of regulatory activity and discusses problems and alternatives in regulatory action Biological Effects of Power Frequency Electric and Magnetic Fields Indira Biological Effects of Power Frequency Electric and Magnetic Fields ,1989 Nair,1989 Biological Effects of Magnetic and Electromagnetic Fields S. Ueno, 2007-07-23 The International Symposium on Biological Effects of Magnetic and Electrom netic Fields was held from September 3 4 1993 at Kyushu University in Fukuoka Japan Originally it was only intended to be an informal gathering of many scientists who had accepted my invitation to visit Kyushu University after the XXIVth General Assembly of the International Union of Radio Science URSI held in Kyoto prior to our symposium However since so many distinguished scientists were able to come it was decided that a more formal symposium would be possible It was a very productive symposium and as a result many of the quests consented that it would be a good idea to gather all the information put forth at the meeting and have it published In addition although they were unfortunately unable to attend the symposium many other distinguished scientists had also expressed their wish to contribute to this effort and in so doing help to increase understanding in this as yet relatively immature field of science The question of both positive and negative effects of magnetic and electromagnetic fields on biological systems has become more and more important in our world today as they Biological Effects of Electric and Magnetic Fields David O.
