

The BSCS second course was developed by a team of university biologists and high school biology teachers and has been tested in high schools over a three year period. After revision of the materials for the summer of 1964 they will be prepared for release in August 1965 by Division-Fall Inc., Englewood Cliffs, New Jersey. This article describes the experimental nature of the second course.

The Interaction of Experiments and Ideas: A BSCS*-Second Course

NOORMAN ABRAHAM

Biological Sciences Curriculum Study, Boulder, Colorado

An apprentice in research might be the best way to describe a student enrolled in the new BSCS advanced biology course. He spends 80% of his time in laboratory work designed to simulate the actual conditions of experimental biology. Failure and frustration as well as elation and understanding are normal experiences.

The BSCS Second Course, although research orientated, is not based upon *laissez faire* "project activities." Students are first carefully guided toward understanding the nature of experimentation and are then encouraged to apply their skills to problems that border on the frontiers of present biological knowledge. The teacher, instead of concentrating on formal lectures, spends much of his time encouraging students to be creative in carrying out suggested experimental procedure and in designing their own experiments to seek solutions to biological problems.

A Rationale for Improvement

A second year of biology is routinely offered in most large high schools (over 1500 students) in the United States although texts and laboratory materials designed for this purpose are virtually nonexistent. The teacher who wishes to teach a second course must, therefore, either design his own pro-

gram or utilize college texts and laboratory manuals.

Since most high school biology teachers lack the time necessary to prepare a complete program of study, the use of college materials, for second year biology, has become widespread throughout our secondary school system.

Among the criticisms of this kind of course is that high school students are introduced to subject matter normally useful only to science majors in colleges and universities. There is evidence that such courses often degenerate into the rote memorization of anatomical detail and physiological facts, reinforced by highly routine laboratory dissection.

Perhaps even less desirable is the practice, in some schools, of naming a course "advanced biology" even though the texts and laboratory manuals were designed as introductory materials for use at the ninth or tenth grade level.

The BSCS Second Course was prepared at the request of teachers who expressed dissatisfaction with these existing "advanced" biology courses. The BSCS was asked to design a course that would build upon and extend the rationale of the BSCS program, emphasizing the processes involved in biological research and reinforcing an understanding of the major themes
