H. Frederick Nijhout, 2018-02-19 This Lecture Notes Volume represents the first time any of the summer school lectures have been collected and published on a discrete subject rather than grouping all of a season's lectures together This volume provides a broad survey of current thought on the problem of pattern formation Spanning six years of summer school lectures it includes articles which examine the origin and evolution of spatial patterns in physio chemical and biological systems from a great diversity of theoretical and mechanistic perspectives In addition most of these pieces have been updated by their authors and three articles never previously published have been added **Biological Soil Crusts:**

Spatio-temporal Development and Ecological Functions of Soil Surface Microbial Communities across Different Scales Shubin Lan, David R. Elliott, Sonia Chamizo, Vincent John Martin Noah Linus Felde, Andrew David Thomas, 2024-08-09

Biological soil crusts biocrusts are widely distributed throughout the world and cover approximately 12% of the terrestrial surface Biocrusts are composed of cyanobacteria algae lichens mosses and a great diversity of other microorganisms which bind soil particles together to form a layer of biological soil matrix on the soil surface typically of several millimetres thickness They are important sites of regional and global microbial diversity and perform multiple ecological functions multifunctionality During the evolution of terrestrial life on earth biocrusts are regarded as the main colonising photosynthetic organisms before the advent of vascular vegetation They not only represent the early stages of terrestrial ecosystems but also facilitate the ecosystem's development and succession Therefore biocrusts are recognised as ecological engineers in the natural development of ecosystems and for the restoration of degraded terrestrial ecosystems The development of biocrusts is highly heterogeneous which is reflected on both temporal and spatial scales and this

heterogeneity is still clearly visible even in a small scale However up to now only limited knowledge is acquired on biocrust temporal and spatial organisation In particular there still is a large knowledge gap regarding the various biocrust communities under different developmental states and their related physiological metabolisms and ecological functions Therefore in depth studies of these issues will undoubtedly further promote our understanding of the heterogeneous development of biocrusts as well as their ecological multifunctionality in terrestrial ecosystems The relevant contributions are expected to provide a scientific basis for the management of biocrusts and technology development e g cyanobacteria induced biocrust technology for ecological restoration and the promotion of soil health

The Phantom Pattern Problem

Gary Smith, Jay Cordes, 2020 We have all been bred to be fooled to be attracted to shiny patterns and glittery correlations Big data and powerful computers feed this addiction because they make it so easy to find such baubles and they also ensure that most of what we find is rubbish It is up to us to resist the allure to not be fooled by phantom pattern Book jacket
