Tolman,Nancy Lehmann Haynes,Biological Sciences Curriculum Study,1982 *The Reforming of General Education* S. A. Barnett,Daniel Bell,2017-07-05 This comprehensive examination of general education by Daniel Bell scrutinizes the experiences of Columbia College Harvard and The College of the University of Chicago These three basic models of general education in the country are set against a background of social change which includes a detailed analysis of structural changes in American society the universities and the secondary schools and what Bell has called the emerging postindustrial society Bell attacks the distinction between general education and specialism He holds that one must embody and exemplify general education through disciplines and extend the context of specialism by setting it within the methodological grounds of knowledge The common link between the two is the emphasis on conceptual inquiry By emphasizing modes of conceptualization how one knows rather than what one knows Bell insists that colleges can have a new vivifying function between the pressures of the secondary and graduate schools In his proposals for a new curriculum Bell sets forth a scheme that imagines the first year as an acquisition of necessary historical and humanistic knowledge the next two years as training in a discipline and the last year the third tier the most radical innovation as a new kind of general education course which would brake specialization and apply disciplined knowledge to broad intellectual and policy

the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history
