Biological Time:

Biological Time, Historical Time ,2018-11-26 Biological Time Historical Time presents a new approach to 19th century thought and literature by focussing on the subject of time it offers a new perspective on the exchanges between French and German literary texts on the one hand and scientific disciplines on the other Hence the rivalling influences of the historical sciences and of the life sciences on literary texts are explored texts from various scientific domains medicine natural history biology history and multiple forms of vulgarisation are investigated Literary texts are analysed in their participation in and transformation of the scientific imagination Special attention is accorded to the temporal dimension this allows for an innovative account of key concepts of 19th century culture **The Geometry of Biological Time** Arthur T. Winfree,2013-06-29 As I review these pages the last of them written in Summer 1978 some retrospective thoughts come to mind which put the whole business into better perspective for me and might aid the prospective reader in choosing how to approach this volume The most conspicuous thought in my mind at present is the diversity of wholly independent explorations that came upon phase singularities in one guise or another during the past decade My efforts to gather the published literature during the last phases of actually writing a whole book about them were almost equally divided between libraries of Biology Chemistry Engineering Mathematics Medicine and Physics A lot of what I call gathering was done somewhat in anticipation in the form of conjecture query and prediction based on analogy between developments in different fields The consequence throughout 1979 was that our long suffering publisher repeatedly had to replace such material by citation of unexpected flurries of papers giving substantive demonstration I trust that the authors of these many excellent reports and especially of those I only found too late will forgive the brevity of allusion I felt compelled to observe in these substitutions A residue of loose ends is largely collected in the index under QUERIES It is clear to me already that the materials I began to gather several years ago represented only the first flickering of what turns out to be a substantial conflagration Metabolic Arrest and the Control of Biological Time Peter W. Hochachka,Michael Guppy,1987 Freshwater turtles and goldfish can survive for several days without oxygen some diving turtles for several months hibernating animals can exist without food for long periods others can survive extreme conditions such as desiccation freezing and thawing These creatures are in effect self sustaining life support systems with a mysterious ability to regulate their own metabolisms These capabilities raise important questions which Hochachka and Guppy explore in this seminal new book What mechanisms turn down or off cell metabolism and other cell functions How does an animal such as an opossum know when to activate mechanisms for slowing or stopping tissue and organ functions How does it know when to turn them on again How extensive is metabolic arrest as a defense against harsh environmental conditions Can we decipher universal principles of metabolic arrest from available data The lessons to be learned are of potentially great interest to clinicians because the authors provide a theoretical framework in which to organize an attack on the all too practical problem of protecting tissues against hypoxia

Areas that may be influenced include research on cardiac arrest strokes acute renal failure liver ischemia lung injury respiratory defense syndrome claudication shock and organ transplant Investigation of other metabolic arrest mechanisms may be similarly useful in both clinical and agricultural fields This is a pioneering book of great use to biomedical clinical researchers and to biologists biochemists and physiologists generally **Biological Clock in Fish** Ewa

Kulczykowska,Włodzimierz Popek,B.G. Kapoor,2010-05-27 Each organism has its own internal biological clock which is reset by environmental cues Zeitgebers thus keeping it synchronized with the external environment It is a chemically based oscillating system within cells relying on molecular feedback loops Circadian biological clocks exist in most organisms What is so special about the clock in f *Biology of Longevity and Aging* Robert Arking,2019-01-10 An introductory text to the biology of aging and longevity offering a thorough review of the field **Space, Time and the Limits of Human**

Understanding Shyam Wuppuluri,Giancarlo Ghirardi,2016-12-01 In this compendium of essays some of the world s leading thinkers discuss their conceptions of space and time as viewed through the lens of their own discipline With an epilogue on the limits of human understanding this volume hosts contributions from six or more diverse fields It presumes only rudimentary background knowledge on the part of the reader Time and again through the prism of intellect humans have tried to diffract reality into various distinct yet seamless atomic yet holistic independent yet interrelated disciplines and have attempted to study it contextually Philosophers debate the paradoxes or engage in meditations dialogues and reflections on the content and nature of space and time Physicists too have been trying to mold space and time to fit their notions concerning micro and macro worlds Mathematicians focus on the abstract aspects of space time and measurement While cognitive scientists ponder over the perceptual and experiential facets of our consciousness of space and time computer scientists theoretically and practically try to optimize the space time complexities in storing and retrieving data information The list is never ending Linguists logicians artists evolutionary biologists geographers etc all are trying to weave a web of understanding around the same duo However our endeavour into a world of such endless imagination is restrained by intellectual dilemmas such as Can humans comprehend everything Are there any limits Can finite thought fathom infinity We have sought far and wide among the best minds to furnish articles that provide an overview of the above topics We hope that through this journey a symphony of patterns and tapestry of intuitions will emerge providing the reader with insights into the questions What is Space What is Time Chapter 15 of this book is available open access under a CC BY 4 0 license

Physical Biology of the Cell Rob Phillips,Jane Kondev,Julie Theriot,Hernan Garcia,2012-10-29 Physical Biology of the Cell is a textbook for a first course in physical biology or biophysics for undergraduate or graduate students It maps the huge and complex landscape of cell and molecular biology from the distinct perspective of physical biology As a key organizing principle the proximity of topics is based on the physical concepts that Seasons of Life John N. Kotre,Elizabeth Hall,1997 Illuminates the stages of life from biological and psychosocial perspectives **The Rhythms Of Life** Leon

Kreitzman, Russell Foster, 2011-09-30 Popular science at its most exciting the breaking new world of chronobiology understanding the rhythm of life in humans and all plants and animals The entire natural world is full of rhythms The early bird catches the worm and migrates to an internal calendar Dormice hibernate away the winter Plants open and close their flowers at the same hour each day Bees search out nectar rich flowers day after day There are cicadas that can breed for only two weeks every 17 years And in humans why are people who work anti social shifts more illness prone and die younger What is jet lag and can anything help Why do teenagers refuse to get up in the morning and are the rest of us really larks or owls Why are most people born and die between 3am 5am And should patients be given medicines and operations at set times of day because the body reacts so differently in the morning evening and at night The answers lie in our biological clocks the mechanisms which give order to all living things They impose a structure that enables us to change our behaviour in relation to the time of day month or year They are reset at sunrise and sunset each day to link astronomical time with an organism s internal time Fundamentals and Applications of Controlled Release Drug Delivery Juergen Siepmann, Ronald A. Siegel, Michael J. Rathbone, 2011-12-15 This book approaches the subject from a mechanistic perspective that pitches the language at a level that is understandable to those entering the field and who are not familiar with its common phrases or complex terms It provides a simple encapsulation of concepts and expands on them In each chapter the basic concept is explained as simply and clearly as possible without a great deal of detail then in subsequent sections additional material exceptions to the general rule examples etc is introduced and built up Such material was generously supplemented with diagrams conceptually elegant line diagrams in two or three colors The artwork was well thought out and able to condense the scientific principles into a novel and visually exciting form The diagrams encourage browsing or draw the reader to salient points In addition the technique of highlighting key concepts in a separate box is used throughout each chapter

Ricoeur's Critical Theory David M. Kaplan, 2012-02-01 In Ricoeur s Critical Theory David M Kaplan revisits the Habermas Gadamer debates to show how Paul Ricoeur s narrative hermeneutics and moral political philosophy provide a superior interpretive normative and critical framework Arguing that Ricoeur s unique version of critical theory surpasses the hermeneutic philosophy of Gadamer Kaplan adds a theory of argumentation necessary to criticize false consciousness and distorted communication He also argues that Ricoeur develops Habermas s critical theory adding an imaginative creative dimension and a concern for community values and ideas of the Good Life He then shows how Ricoeur s political philosophy steers a delicate path between liberalism communitarianism and socialism Ricoeur s version of critical theory not only identifies and criticizes social pathologies posits Kaplan but also projects utopian alternatives for personal and social transformation that would counter and heal the effects of unjust societies The author concludes by applying Ricoeur s critical theory to three related problems the politics of identity and recognition technology and globalization and democracy to show how his works add depth complexity and practical solutions to these problems **Human Biology** Chiras, 2018-02-16 Dan

Chiras once again offers a refreshing and student friendly introduction to the structure function health and homeostasis of the human body in a modernized ninth edition of Human Biology This acclaimed text explores life from a variety of levels and perspectives including cellular molecular by body system through disease and within the environment

Mathematical Nature Of The Living World, The: The Power Of Integration Gilbert A Chauvet,2004-10-01 The topic of the book a theory of functional biology that incorporates the fundamental principles underlying the functioning of living organisms is clearly appropriate as we celebrate the 50th anniversary of the discovery by Watson and Crick of the structure of the DNA molecule The Mathematical Nature of the Living World The Power of Integration is here to remind us that the world of biology is anchored in the world of mathematics and physics and that to understand the living world we need to incorporate the laws of the nonliving matter In particular an important emphasis of the book concerns the relationships between structure and function a point so well illustrated by the work of Watson and Crick A nice aspect of Chauvet s book is that he does place his work and his approach in a general framework and historical background of the work performed by pioneers in a variety of fields ranging from physics to biology As such the book should be of general interest to a wide range of readers from college students interested in integrating biology with physics and mathematics to general readers curious to know more about the differences between the living world and the nonliving matter to professional scientists and teachers concerned with more specific questions regarding relationships between structure and function in biology

On the Way to Understanding the Time Phenomenon A. P. Levich,1995 The subject of this book is time one of the small number of elusive essences of the world unsubdued by human will The three global problems of natural science those of the origin of the Universe life and consciousness cannot be solved without finding out the nature of time Without a good construction of time it is impossible to describe to qualify to forecast and to control various processes in the animate and inanimate nature Special attention is paid to the ways of adequate inclusion of the properties of time in the derivation of the fundamental equations of motion for natural systems

Progress in Physics, vol. 1/2014 Dmitri Rabounski, Florentin Smarandache, Larissa Borissova, The Journal on Advanced Studies in Theoretical and Experimental Physics including Related Themes from Mathematics Building Theories David Danks, Emiliano Ippoliti, 2018-01-18 This book explores new findings on the long neglected topic of theory construction and discovery and challenges the orthodox current division of scientific development into discrete stages the stage of generation of new hypotheses the stage of collection of relevant data the stage of justification of possible theories and the final stage of selection from among equally confirmed theories The chapters written by leading researchers offer an interdisciplinary perspective on various aspects of the processes by which theories rationally should and descriptively are built They address issues such as the role of problem solving and heuristic reasoning in theory building how inferences and models shape the pursuit of scientific knowledge the relation between problem solving and scientific discovery the relative values of the syntactic semantic and pragmatic view of theories in understanding theory construction and the relation between ampliative inferences heuristic reasoning and models as a means for building new theories and knowledge Through detailed arguments and examinations the volume collectively challenges the orthodox view's main tenets by characterizing the ways in which the different stages are logically temporally and psychologically intertwined As a group the chapters provide several attempts to answer long standing questions about the possibility of a unified conceptual framework for building theories and formulating hypotheses *Pediatric Hypertension* Ronald J.
