Paul Schaudies, 2014-05-08 Biological Identification provides a detailed review of and potential future developments in the technologies available to counter the threats to life and health posed by natural pathogens toxins and bioterrorism agents Biological identification systems must be fast accurate reliable and easy to use It is also important to employ the most suitable technology in dealing with any particular threat This book covers the fundamentals of these vital systems and lays out possible advances in the technology Part one covers the essentials of DNA and RNA sequencing for the identification of pathogens including next generation sequencing NGS polymerase chain reaction PCR methods isothermal amplification and bead array technologies Part two addresses a variety of approaches to making identification systems portable tackling the special requirements of smaller mobile systems in fluid movement power usage and sample preparation Part three focuses on a range of optical methods and their advantages Finally part four describes a unique approach to sample preparation and a promising approach to identification using mass spectroscopy Biological Identification is a useful resource for academics and engineers involved in the microelectronics and sensors industry and for companies medical organizations and military bodies looking for biodetection solutions Covers DNA sequencing of pathogens lab on chip and portable systems for biodetection and analysis Provides an in depth description of optical systems and explores sample preparation and mass spectrometry based biological analysis **Biological Identification with Computers** R. J. Pankhurst, 1975 **Forensic Human Identification** Tim Thompson, Sue Black, 2006-11-14 Identity theft criminal investigations of the dead or missing mass disasters both by natural causes and by criminal intent with this as our day to day reality the establishment and verification of human identity has never been more important or more prominent in our society Maintaining and protecting the integrity of our identity has reached levels of unprecedented importance and has led to international legislation to protect our human rights Forensic Human Identification An Introduction examines the variety of biological indicators that are available to investigators and illustrates the basic principles of each discipline While DNA and fingerprints are clearly the favored methods of identification they require a prior record and verifiable baseline for comparison When these tools cannot be used it is necessary to employ those biological factors with higher variation and lower diagnostic probability This reference introduces a number of different specialties such as foot and earprinting dental interventions skeletal anomalies tattoos facial reconstruction personal effects and handwriting While recognizing that no single factor is an absolute indicator of identity the contributors explain how a multitude of factors taken into summative consideration can establish a probability for confirmation They discuss the difference between positive and probable identification and the use of exclusion to confirm identity Using three high profile case studies the book addresses the context of human identification in today's society and illustrates the use of techniques described in the text Heavily referenced and using more than 120 charts figures photographs and tables Forensic

Human Identification An Introduction provides detailed introductory and extended information to newcomers and experts alike on the wide range of identification techniques in international practice Biological Shape Analysis - Proceedings Of The 4th International Symposium Pete E Lestrel,2017-04-27 This volume represents an ongoing series entitled Biological Shape Analysis of which this is the 4th Edition These proceedings represent state of the art research in the field of biology broadly based that deal with the quantitative analysis of the shape of the biological form These numerical analyses include Fourier analytic methods wavelets neural networks machine vision machine learning median axis transforms spectral clustering genome wide association studies 3D surface mapping as well as more traditional morphometric approaches Studies included are drawn from research in agricultural genetics anatomy anthropology botany dentistry entomology forensics human evolution paleontology primatology to name a few The shape of forms can be considered of central importance in terms of identification comparison and classification of biological organisms These proceedings of which this is the fourth one are unique in that they deal extensively with a wide range of organisms in biology including both fauna and flora They bring together diverse practitioners from a wide variety of disciplines This represents a major departure from the current emphasis on specialization in the biological sciences It is of particular importance to note that these issues dealing with shape analysis of biological structures are found to be common across very diverse disciplines and these proceedings are the first ones to highlight this There are no volumes currently available that are as broadly based as these proceedings in dealing with the quantification of shape analysis 1 These volumes are unique in their diversity in covering the biological disciplines 2 The emphasis on numerical approaches and 3 the numerous state of the art research papers
