Liebherr,1970 **The Reforming of General Education** S. A. Barnett,Daniel Bell,2017-07-05 This comprehensive examination of general education by Daniel Bell scrutinizes the experiences of Columbia College Harvard and The College of the University of Chicago These three basic models of general education in the country are set against a background of social change which includes a detailed analysis of structural changes in American society the universities and the secondary schools and what Bell has called the emerging postindustrial society Bell attacks the distinction between general education and specialism He holds that one must embody and exemplify general education through disciplines and extend the context of specialism by setting it within the methodological grounds of knowledge The common link between the two is the emphasis on conceptual inquiry By emphasizing modes of conceptualization how one knows rather than what one knows Bell insists that colleges can have a new vivifying function between the pressures of the secondary and graduate schools In his proposals for a new curriculum Bell sets forth a scheme that imagines the first year as an acquisition of necessary historical and humanistic knowledge the next two years as training in a discipline and the last year the third tier the most radical innovation as a new kind of general education course which would brake specialization and apply disciplined knowledge to broad intellectual and policy questions *Handbook of Research on Science Education, Volume II* Norman G.

Lederman,Sandra K. Abell,2014-07-11 Building on the foundation set in Volume I a landmark synthesis of research in the field Volume II is a comprehensive state of the art new volume highlighting new and emerging research perspectives The contributors all experts in their research areas represent the international and gender diversity in the science education research community The volume is organized around six themes theory and methods of science education research science learning culture gender and society and science learning science teaching curriculum and assessment in science science teacher education Each chapter presents an integrative review of the research on the topic it addresses pulling together the existing research working to understand the historical trends and patterns in that body of scholarship describing how the issue is conceptualized within the literature how methods and theories have shaped the outcomes of the research and where the strengths weaknesses and gaps are in the literature Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research the Handbook of Research on Science Education Volume II is an essential resource for the entire science education community *Books Related to Compensatory Education*

The Structure of Evolutionary Theory Stephen Jay Gould,2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century
