B. Carnoy, 1884 **Biologie cellulaire et moléculaire** Gerald Karp, 2010-03-15 Cette 3^e édition d'crit de manière synthétique la structure de la cellule vivante son fonctionnement les interactions entre ses différents compartiments ainsi que les

relations qu'elle entretient avec les autres cellules de l'organisme. Cette 3^e édition suit les débats et les progrès actuels de la biologie cellulaire et moléculaire : la résistance aux antibiotiques, les maladies héréditaires, les virus, etc. Gerald C. Karp met en évidence la complexité des mécanismes moléculaires contrôlant la participation des différents organites cellulaires à la vie de la cellule et celle des différentes cellules à la vie saine de l'organisme. Il décrit par ailleurs comment certaines déficiences de ces processus complexes de régulation mènent à la maladie. Cette approche qui consiste en la confrontation des mécanismes normaux et pathologiques constitue l'essence même des recherches biomédicales telles que celles qui débouchent sur la laboration de médicaments. L'histoire détaillée de certaines découvertes illustre par ailleurs l'ingéniosité et la patience dont ont fait preuve des générations de chercheurs pour développer les techniques d'investigation du monde microscopique. Ce livre est rédigé de manière didactique et est agréable à lire. Il s'ouvre sur des perspectives qui touchent l'homme comme les applications cliniques. Mais il est surtout agrémenté d'illustrations et de micrographies d'une grande qualité qui aident les étudiants à se représenter les processus cellulaires et moléculaires complexes avec plus de 60 nouvelles photomicrographies et images construites par ordinateur. Ce livre s'adresse principalement aux étudiants des premiers et deuxièmes cycles en sciences médicales, pharmacie et agronomie.

Les contenus sont conformes aux enseignements universitaires des licences mention psychologie débouchant sur les masters professionnels ou de recherche. Connaissant bien les besoins des étudiants, les auteurs enseignants-chercheurs proposent un cours actualisé tenant compte des recherches les plus récentes et de nouveaux documents permettant d'acquiescer les compétences et savoir-faire indispensables en lien avec des pratiques réelles. Chaque chapitre comporte une partie documents et exercices aussi développée que la partie cours. Les étudiants pourront ainsi par une activité autonome et complémentaire aux cours d'amphi et aux travaux dirigés se préparer aux examens tout en développant leur sens critique.

Atlas de biologie cellulaire Jean-Claude Roland, Jean-Claude Callen, Annette Szöllösi, Daniel Szöllösi, 1993

À la fois descriptive et expérimentale, la biologie cellulaire s'est dotée d'instruments d'observation de plus en plus puissants pour rendre compte des processus internes à la cellule. Cet atlas présente des clichés couvrant l'ensemble des activités cellulaires réalisées en microscopie électronique et photonique. De nombreux schémas interprétatifs accompagnent les illustrations et mettent en évidence leurs structures caractéristiques. Les données morphologiques sont assorties de commentaires sur les fonctions et les processus

Garfield,2013-11-11 The mechanisms that initiate labour i.e the conversion of the quiescent uterus to an active and reactive organ at term are poorly understood Of considerable importance are the factors that control preterm labour and preterm birth with their devastating effects on society This problem is the leading obstetrical issue Preterm labour affects approximately 10% of all pregnant women even higher numbers are reported for less developed countries or where prenatal healthcare is a low priority and it is the leading cause of morbidity and mortality of babies Current practices to arrest preterm labour once initiated are ineffective In addition procedures to stimulate labour and dilate the cervix at term may not be used effectively On October 19th 21 st 1992 a Schering Foundation Workshop took place in Berlin to discuss the Basic Mechanisms Controlling Term and Preterm Labour Leading scientists from Europe and North America were assembled to consider the fundamental systems which regulate the uterus and cervix during pregnancy The topics in the symposium ranged from key cellular events governing uterine contractility and cervical dilatation during labour to clinical advances and applications This book contains the proceedings of the workshop We were pleased to have been part of the workshop and to have been responsible for its organization Dynamical Networks in Physics and Biology D. Beysens,G. Forgacs,2013-06-29 The 1997 Les Houches workshop on Dynamical Network in Physics and Biology was the third in a series of meetings At the Frontier between Physics and Biology Our objective with these workshops is to create a truly interdisciplinary forum for researchers working on outstanding problems in biology but using different approaches physical chemical or biological Generally speaking the biologists are trained in the particular and motivated by the specifics while in contrast the physicists deal with generic and universal models All agree about the necessity of developing robust models The specific aim of the workshop was to bridge the gap between physics and biology in

the particular field of interconnected dynamical networks The proper functioning of a living organism of any complexity requires the coordinated activity of a great number of units Units or in physical terms degrees of freedom that couple to one another typically form networks The physical or biological properties of interconnected networks may drastically differ from those of the individual units the whole is not simply an assembly of its parts as can be demonstrated by the following examples Above a certain critical concentration the metallic islands randomly distributed in an insulating matrix form an interconnected network At this point the macroscopic conductivity of the system becomes finite and the amorphous metal is capable of carrying current The value of the macroscopic conductivity typically is very different from the conductivity of the individual metallic islands
