Biology As Society Society As Biology Metaphors:

Biology as Society, Society as Biology: Metaphors Sabine Maasen, E. Mendelsohn, P. Weingart, 2013-12-01 not lie in the conceptual distinctions but in the perceived functions of metaphors and whether in the concrete case they are judged positive or negative. The ongoing debates reflect these concerns quite clearly namely that metaphors are judged on the basis of supposed dangers they pose and opportunities they offer. These are the criteria of evaluation that are obviously dependent on the context in which the transfer of meaning occurs. Our fundamental concern is indeed the transfer itself its prospects and its limits. Looking at possible functions of metaphors is one approach to understanding and elucidating sentiments about them. The papers in this volume illustrate by quite different examples three basic functions of metaphors illustrative heuristic and constitutive. These functions represent different degrees of transfer of meaning. Metaphors are illustrative when they are used primarily as a literary device to increase the power of conviction of an argument for example. Although the difference between the illustrative and the heuristic function of metaphors is not great it does exist metaphors are used for heuristic purposes whenever differences of meaning are employed to open new perspectives and to gain new insights. In the case of constitutive metaphors they function to actually replace previous meanings by new ones. Sabine Maasen in her paper introduces the distinction between transfer and transformation.

Critical Realism Justin Cruickshank, 2003-09-02 This reader is designed to make accessible in one volume to lay person and academic student and teacher alike key readings to stimulate debate about and within critical realism.

Metaphors for Environmental Sustainability Brendon Larson, 2011-06-28. Scientists turn to metaphors to formulate and explain scientific concepts but an ill considered metaphor can lead to social misunderstandings and counterproductive policies. Brendon Larson observes in this stimulating book. He explores how metaphors can entangle scientific facts with social values and warns that particularly in the environmental realm incautious metaphors can reinforce prevailing values that are inconsistent with desirable sustainability outcomes. *Metaphors for Environmental Sustainability* draws on four case studies two from nineteenth century evolutionary science and two from contemporary biodiversity science to reveal how metaphors may shape the possibility of sustainability. Arguing that scientists must assume greater responsibility for their metaphors and that the rest of us must become more critically aware of them the author urges more critical reflection on the social dimensions and implications of metaphors while offering practical suggestions for choosing among alternative scientific metaphors.

Human By Nature Peter Weingart, Sandra D. Mitchell, Peter J. Richerson, Sabine Maasen, 2013-06-17. Representing a wide range of disciplines biology sociology anthropology economics human ethology psychology primatology history and philosophy of science the contributors to this book recently spent a complete academic year at the Center for Interdisciplinary Research ZiF discussing a plethora of new insights in reference to human cultural evolution. These scholars acted as a living experiment of interdisciplinarity in vivo. The assumption of this experiment was that the scholars while working and residing at the ZiF would be united.

intellectually as well as socially a connection that might eventually enhance future interdisciplinary communication even after the research group had dispersed An important consensus emerged The issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural and hence to the disciplinary division of scientific labor The appropriate place for the study of human culture in this group's view is located between biology and the social sciences Explicitly avoiding biological and sociological reductionisms the group adopted a pluralistic perspective integrative pluralism that took into account both today's highly specialized and effective subdisciplinary research and the possibility of integrating the respective findings on a case by case basis Each sub group discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of several types of fruitful cooperation such as a fully integrated chapter a multidisciplinary overview or a discussion between different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human culture this book will be of interest to social scientists and biologists alike

Political Language and Metaphor Terrell Carver, Jernej Pikalo, 2008-03-04 This book is the first to develop new methodological approaches to understand and analyze the use of metaphor in political science and international relations

Philosophy of the Social Sciences Patrick Baert, 2016-01-08 In this ground breaking new text Patrick Baert analyses the central perspectives in the philosophy of social science critically investigating the work of Durkheim Weber Popper critical realism critical theory and Rorty's neo pragmatism Places key writers in their social and political contexts helping to make their ideas meaningful to students Shows how these authors' views have practical uses in empirical research Lively approach that makes complex ideas understandable to upper level students as well as having scholarly appeal

Everything Flows Daniel J. Nicholson, John Dupré, 2018 Against the traditional view of the living world as fundamentally composed of enduring things this book argues for the radical alternative is that it essentially consists of processes Biology is the study of the processes that constitute living beings and the things biologists study ultimately derive their existence from more basic processes

The ^AOxford Handbook of Cognitive Linguistics Dirk Geeraerts, Hubert Cuyckens, 2010-06-09 The Oxford Handbook of Cognitive Linguistics presents a comprehensive overview of the main theoretical concepts and descriptive theoretical models of Cognitive Linguistics and covers its various subfields theoretical as well as applied

The Evolutionary Foundations of Economics Kurt Dopfer, 2005-05-23 It is widely recognised that mainstream economics has failed to translate micro consistently into macro economics and to provide endogenous explanations for the continual changes in the economic system Since the early 1980s a growing number of economists have been trying to provide answers to these two key questions by applying an evolutionary approach This new departure has yielded a rich literature with enormous variety but the unifying principles connecting the various ideas and views presented are as yet not apparent This 2005 volume brings together fifteen original articles from scholars each of whom has made a significant contribution to the field in their common effort to reconstruct economics as an evolutionary science Using meso economics as an analytical

entity to bridge micro and macro economics as well as static and dynamic realms a unified economic theory emerges

Accounting and Science Michael Power, 1996-06-28 In recent years policy makers and scientists have become increasingly interested in the economics of science and in particular in the relationship between accounting and science This book originally published as a special issue of the journal *Science in Context* provides a truly interdisciplinary approach to this subject The contributors explore in a number of different ways the constitutive role that practices of economic calculation play in the conduct of science and the forms of economic life within which science is embedded Challenging conventional views they suggest that if scientific and accounting practices are to be properly understood they must be studied in relation to a complex background of specialist communities funding institutions and demands for public accountability This book will be invaluable for scholars and policy makers working in the field

Philosophy of Ecology, 2011-05-16 The most pressing problems facing humanity today over population energy shortages climate change soil erosion species extinctions the risk of epidemic disease the threat of warfare that could destroy all the hard won gains of civilization and even the recent fibrillations of the stock market are all ecological or have a large ecological component in this volume philosophers turn their attention to understanding the science of ecology and its huge implications for the human project To get the application of ecology to policy or other practical concerns right humanity needs a clear and disinterested philosophical understanding of ecology which can help identify the practical lessons of science Conversely the urgent practical demands humanity faces today cannot help but direct scientific and philosophical investigation toward the basis of those ecological challenges that threaten human survival This book will help to fuel the timely renaissance of interest in philosophy of ecology that is now occurring in the philosophical profession Provides a bridge between philosophy and current scientific findings Covers theory and applications Encourages multi disciplinary dialogue

Science Studies Sabine Maasen, Matthias Winterhager, 2015-09-15 How can we understand the intensifying interactions of science and society It is the interdisciplinary field called science studies that provides us with a rich inventory of analytical approaches They help us explore science as a practice a subsystem a culture and an institution Their joint observation Science today is part and parcel of what has come to be known as knowledge society More than ever knowledge production and consumption are in need of incessant monitoring and sophisticated reflection Nine exemplary studies that inquire into or are themselves examples of the dynamics of scientific knowledge are included here They cover issues as diverse as eugenics climate research and the role of historiography and make use of different tools such as evolutionary reasoning metaphor and bibliometrics Finally they ponder the need for science to go public PUS as well as for society to regulate knowledge and to restructure universities as building blocks of our science system Their joint message Science studies can and should assume an active role in observing reflecting and communicating the intricate encounters of science and society today

Active Materials Peter Fratzl, Michael Friedman, Karin Krauthausen, Wolfgang Schäffner, 2021-12-20 What are active materials This book aims to

introduce and redefine conceptions of matter by considering materials as entities that sense and respond to their environment. By examining the modeling of the experiments on and the construction of these materials and by developing a theory of their structure, their collective activity and their functionality, this volume identifies and develops a novel scientific approach to active materials. Moreover, essays on the history and philosophy of metallurgy, chemistry, biology and materials science provide these various approaches to active materials with a historical and cultural context. The interviews with experts from the natural sciences included in this volume develop new understandings of active matter and active materials in relation to a range of research objects and from the perspective of different scientific disciplines including biology, physics, chemistry and materials science. These insights are complemented by contributions on the activity of matter and materials from the humanities and the design field. Discusses the mechanisms of active materials and their various conceptualizations in materials science. Redefines conceptions of active materials through interviews with experts from the natural sciences. Contextualizes, historicizes and reflects on different notions of matter, materials and activity through contributions from the humanities. A highly interdisciplinary approach to a cutting edge research topic with contributions from both the sciences and the humanities.

The Nazi Conscience Claudia Koonz, 2005-11-30 Koonz's latest work reveals how racial popularizers developed the infrastructure and rationale for genocide during the so-called normal years before World War II. Challenging conventional assumptions about Hitler, Koonz locates the source of his charisma not in his summons to hate but in his appeal to the collective virtue of his people, the Volk.

Global Knowledge Production in the Social Sciences Wiebke Keim, Ercüment Çelik, Veronika Wöhrer, 2016-04-22 An innovative contribution to debates on the internationalization and globalization of the social sciences, this book pays particular attention to their theoretical and epistemological reconfiguration in the light of postcolonial critiques and critiques of Eurocentrism. Bringing together theoretical contributions and empirical case studies from around the world including India, the Americas, South Africa, Australia and Europe, it engages in debates concerning public sociology and explores South-South research collaborations specific to the social sciences. Contributions transcend established critiques of Eurocentrism to make space for the idea of global social sciences and truly transnational research. Thematically arranged and both international and interdisciplinary in scope, this volume reflects the different theoretical and thematic backgrounds of the contributing authors who enter into dialogue and debate with one another in the development of a more inclusive, more representative and more theoretically relevant stage for the social sciences. A rigorous critique of the contemporary state of the social sciences as well as an attempt to find another way of doing transnational sociology. *Global Knowledge Production in the Social Sciences* will appeal to scholars of sociology, political science and social theory with interests in the production of social scientific knowledge, postcolonialism and transnationalism in research.

Domains and Major Transitions of Social Evolution Jacobus J. Boomsma, 2022 This thought-provoking text presents a fresh synthesis of the principles of social evolution that underlie the major transitions, explaining how the basic theory underpinning social

evolution inclusive fitness theory is central to understanding each event **Postmodern Aristotle** Alfredo Marcos, 2013-01-16 The modern world was in part born as a reaction against Aristotelianism However the image of Aristotle to which modern philosophers reacted was partial to say the least Paradoxical though it may seem today more than twenty three centuries on we may now be in the most advantageous position for understanding the Stagirite s philosophy and applying it to contemporary problems The present book contributes to the forming of an idea of Post modern reason inspired by a constellation of Aristotelian concepts such as prudence phronesis practical truth aletheia praktike science in act episteme en energeiai metaphor metaphora similarity homoiosis and the imitation creation pair mimesis poiesis They all form an interconnected network and together they make up an idea of reason that may prove suitable for the present These concepts offer the most promising basis for undertaking a series of urgent reconciliations of facts and values of means and ends of theoretical and practical reason of intelligence and emotion Aristotle s notions could help solve many dualisms of modern times He offers a third way between identity and difference in ontology and politics between algorithm and anarchism in methodology between na ve realism and plain relativism in epistemology between equivocality and univocity in language between Enlightenment and Romanticism in culture On the way this shift facilitates the relationships between science arts and ethics the three parts of the sphere of culture which Modernity had separated as well as the integration of the sphere of culture itself with the world of life *Herbert Spencer: Legacies* Mark Francis, Michael W. Taylor, 2014-10-10 Herbert Spencer Legacies explores and assesses the impact of the ideas and work of the great Victorian polymath Herbert Spencer across a wide range of disciplines In the course of the essays a significant re evaluation of his influence on Victorian and Edwardian thought is provided Spencer s contribution to the fields of sociology anthropology psychology biology and ecology are considered alongside his influence on key figures in science and philosophy The book brings together scholars from a wide range of disciplines to explore Spencer s nuanced and complex ideas and will be invaluable for historians of science and ideas and all those interested in the intellectual culture of the late Victorian and Edwardian period Contributors Peter J Bowler James Elwick Mark Francis Bernard Lightman Chris Renwick Vanessa L Ryan John Skorupski Michael W Taylor Stephen Tomlinson and Jonathan H Turner *Charles Darwin* E. Janet Browne, 1996 Traces the life of the great British scientist describes his travels as a naturalist and traces the development of his theories *Plants and Politics in Padua During the Age of Revolution, 1820-1848* Ariane Dröscher, 2021-10-22 This book highlights the close interactions between plants plant knowledge politics and social life in Padua during the age of revolution It explores the lives and thoughts of two brothers the lawyer Andrea Meneghini and the botanist Giuseppe Meneghini illustrating the unspoken dreams of progress and a new social order but also sheds light on the ambiguous relationship between the Paduan elite and Austrian rule before the 1848 revolution A closer look at park designs gardening associations and networks flower exhibitions agricultural societies organicist metaphors and botanical research on the organization of living bodies opens up

unexpected parallels between actors and ideas of two apparently distant areas botany and political economy
