Purpose Samuel T. Wilkinson, 2024-03-05 By using principles from a variety of scientific disciplines Yale Professor Samuel Wilkinson provides a framework for human evolution that reveals an overarching purpose to our existence Generations have been taught that evolution implies there is no overarching purpose to our existence that life has no fundamental meaning We are merely the accumulation of tens of thousands of intricate molecular accidents Some scientists take this logic one step further suggesting that evolution is intrinsically atheistic and goes against the concept of God But is this true By integrating emerging principles from a variety of scientific disciplines ranging from evolutionary biology to psychology Yale Professor Samuel Wilkinson provides a framework of evolution that implies not only that there is an overarching purpose to our existence but what this purpose is With respect to our evolution nature seems to have endowed us with competing dispositions what Wilkinson calls the dual potential of human nature We are pulled in different directions selfishness and altruism aggression and cooperation lust and love When we couple this with the observation that we possess a measure of free will all this strongly implies there is a universal purpose to our existence This purpose at least one of them is to choose between the good and evil impulses that nature has created within us Our life is a test This is a truth as old as history it seems that has been espoused by so many of the world s religions From a certain framework these aspects of human nature including how evolution shaped us are evidence for the existence of a God not against it Closely related to this is meaning What is the meaning of life Based on the scientific data it would seem that one such meaning is to develop deep and abiding relationships At least that is what most people report are the most meaningful aspects of their lives This is a function of our evolution It is how we were created

The Social Evolution of Human Nature Harry Smit, 2014-04-03 This book sheds new light on the problem of how the human mind evolved Harry Smit argues that current studies of this problem misguidedly try to solve it by using variants of the Cartesian conception of the mind and shows that combining the Aristotelian conception with Darwin s theory provides us with far more interesting answers He discusses the core problem of how we can understand language evolution in terms of inclusive fitness theory and investigates how scientific and conceptual insights can be integrated into one explanatory framework which he contrasts

with the alternative Cartesian derived framework He then explores the differences between these explanatory frameworks with reference to co operation and conflict at different levels of biological organization the evolution of communicative behaviour the human mind language and moral behaviour His book will interest advanced students and scholars in a range of subjects including philosophy biology and psychology **Human Nature and Biocultural Evolution** Joseph

Lopreato,2024-12-02 First published in 1984 Human Nature and Biocultural Evolution aims to delineate a theory of human nature viewed as an interrelated set of genetically programmed behavioral predispositions and a theory of biocultural evolution The author s approach is based on the hypothesis that innate predispositions and cultural environmental factors cooperate to determine human behavior and socio cultural forms Professor Lopreato begins by tracing the development of evolutionary biology up to sociobiology It is his argument that the social and biological disciplines have for over a century been moving towards a synthesis and that Homo sapiens is neither just another animal nor so unique a being that culture has become divorced from its genetic underpinnings The argument is supported with evidence from evolutionary biology and social science with a critical discussion of basic issues of behavioral science and with an analysis of certain famous theories in social science e g theories of suicide anomie capitalism which prove to be richer and more complete when viewed from a biocultural perspective The theory of human nature is arrived at through a rich analysis of ethnographic psychological and sociological arguments and data as well as facts and theories from comparative zoology In the process the author treats critically numerous theoretical problems associated with topics such as exploitation class consciousness structured inequality reciprocal behavior territorial aggression religious ritual socialization ethnicity and prejudice The author concludes with an examination of behavioral predispositions that are hypothesized to be at the base of cultural variation The Red Queen

Goldsmith, 1994 In this stimulating book Goldsmith argues that biology has a great deal to say that should be of interest to social scientists historians philosophers and humanists in general He believes that anyone studying the social behavior of humans must take into consideration both proximate cause the physiology biochemistry and social mechanisms of behavior and ultimate cause how the behavior came to exist in evolutionary time Goldsmith a neurobiologist draws examples from neurobiology psychology and ethology behavioral evolution The result is a work that overcomes many of the misconceptions that have hindered the rich contributions the biological sciences have to offer concerning the evolution of human society behavior and sense of identity Among the key topics addressed are the nature of biological explanation the relationship between genes and behavior those aspects of behavior most likely to respond to natural selection the relationship between evolution and learning and some probable modes of interaction between cultural and biological evolution By re-examining the role of biological explanation in the domain of social development the author has significantly advanced a more well rounded view of human evolution and shed new light on the perennial question of what it means to be human His book will appeal to biologists social scientists traditional humanists and interested general readers

Sharon,2013-10-11 New biotechnologies have propelled the question of what it means to be human or posthuman to the forefront of societal and scientific consideration This volume provides an accessible critical overview of the main approaches in the debate on posthumanism and argues that they do not adequately address the question of what it means to be human in an age of biotechnology Not because they belong to rival political camps but because they are grounded in a humanist ontology that presupposes a radical separation between human subjects and technological objects The volume offers a comprehensive mapping of posthumanist discourse divided into four broad approaches two humanist based approaches dystopic and liberal posthumanism and two non humanist approaches radical and methodological posthumanism The author compares and contrasts these models via an exploration of key issues from human enhancement to eugenics to new configurations of biopower questioning what role technology plays in defining the boundaries of the human the subject and nature for each Building on the contributions and limitations of radical and methodological posthumanism the author develops a novel perspective mediated posthumanism that brings together insights in the philosophy of technology the sociology of biomedicine and Michel Foucault s work on ethical subject constitution In this framework technology is neither a neutral tool nor a force that alienates humanity from itself but something that is always already part of the experience of being human and subjectivity is viewed as an emergent property that is constantly being shaped and transformed by its engagements with biotechnologies Mediated posthumanism becomes a tool for identifying novel ethical modes of human experience that are richer and more multifaceted than current posthumanist perspectives allow for The book will be essential reading for students and scholars working on ethics and technology philosophy of technology poststructuralism technology and the body and medical ethics *Human Nature and Suffering* Paul Gilbert,2016-08-05 Human Nature and Suffering is a profound comment on the human condition from the perspective of evolutionary psychology Paul Gilbert explores the implications of humans as evolved social animals suggesting that evolution has given rise to a varied set of social competencies which form the basis of our personal knowledge and understanding Gilbert shows how our primitive competencies become modified by experience both satisfactorily and unsatisfactorily He highlights how cultural factors may modify and activate many of these primitive competencies leading to pathology proneness and behaviours that are collectively survival threatening These varied themes are brought together to indicate how the social construction of self arises from the organization of knowledge encoded within the competencies This Classic Edition features a new introduction from the author bringing Gilbert s early work to a new audience The book will be of interest to clinicians researchers and historians in the field of psychology
