Laboratory Protocols in Fungal Biology Vijai Kumar Gupta, Maria Tuohy, 2022-02-03 Mycology has an integral role to play in the development of the biotechnology and biomedical sectors. It has become a subject of increasing importance as new fungi and their associated biomolecules are identified. As this discipline comes to the forefront of research in these sectors, the requirement for a consolidation of available research approaches is required. The First Edition of this book has a few basic and applied protocols. With the Second Edition, this book provides consolidated information on recent developments and the most widely used mycological methods available in the fields of biochemistry, biotechnology, and microbiology. The methods outlined offer clear and concise directions to the reader and covers both standard protocols and more applied mycological methods. This book provides useful information for undergraduates, postgraduates, and specialists and researchers studying fungal biology.

*Advances in Microbial Ecology* K. Marshall, 2013-11-11 Since the appearance of the first volume of *Advances in Microbial Ecology* in 1977 under the editorship of Martin Alexander, the series has achieved wide recognition as a source of in-depth critical and sometimes provocative reviews on the ecology of microorganisms in natural and man-made ecosystems. Most reviews published in *Advances* have been prepared by experts at the invitation of the Editorial Board. The Board intends to continue its policy of soliciting reviews, but individuals are encouraged to submit outlines of unsolicited contributions for consideration of their suitability for publication in *Advances*. Volume 7 of *Advances in Microbial Ecology* covers a range of topics related to the ecology of microorganisms in natural and artificial habitats. R. M. Atlas discusses the measurement and significance of diversity in microbial communities. The nature of deserts and the activity of microorganisms in desert soils are considered by J. Skujalski. D. B. Nedwell examines both the input and the mineralization of organic carbon in anaerobic aquatic sediments. The role of microcosms in the evaluation of interactions between pollutants and microorganisms is the basis of a major review by P. H. Pritchard and A. W. Bourquin.
