**Australian Mammals** Stephen M. Jackson, 2025-06-02 Australian Mammals Biology and Captive Management is a complete guide to the husbandry of all groups of Australian mammals This second edition has been updated based on the latest research bringing together current knowledge of the biology and behaviour of each species in captive situations and providing guidance for hand rearing It covers advances from the last 20 years including developments in assisted breeding genetic techniques updated taxonomy and the importance of Australian mammal welfare both physical and mental Written in collaboration with experts in captive management ecology and veterinary science chapters are presented for each taxonomic group of Australian mammals Each chapter covers animal welfare natural history housing requirements general husbandry feeding requirements handling and transport health requirements behaviour breeding and artificial rearing Australian Mammals provides practical guidance for zookeepers veterinarians zoologists researchers and students

**Gliding Mammals of the World** Stephen Matthew Jackson, 2012 This book provides a synthesis of all that is known about the biology of gliding mammals It includes a brief description of each species together with a map and a full colour painting It outlines the origins and biogeography of each group of gliding mammals and examines the incredible physical adaptations

Invasion Biology and Ecological Theory Herbert H. T. Prins, Iain J. Gordon, 2014-01-23 Many conservationists argue that invasive species form one of the most important threats to ecosystems the world over often spreading quickly through their new environments and jeopardising the conservation of native species As such it is important that reliable predictions can be made regarding the effects of new species on particular habitats This book provides a critical appraisal of ecosystem theory using case studies of biological invasions in Australasia Each chapter is built around a set of eleven central hypotheses from community ecology which were mainly developed in North American or European contexts The authors examine the hypotheses in the light of evidence from their particular species testing their power in explaining the success or failure of invasion and accepting or rejecting each hypothesis as appropriate The conclusions have far reaching consequences for the utility of community ecology suggesting a rejection of its predictive powers and a positive reappraisal of natural history

*Walker's Mammals of the World* Ronald M. Nowak, 2018-06-15 Walker's vision the text smoothly combines in depth scholarship with a popular readable style to preserve and enhance what the Washington Post called a landmark of zoological literature

**Gliders of Australia** David Lindenmayer, 2002 This book deals with all six species of Australian gliders which range in size from the tiny 12 gram Feathertail Glider to the 1.3 kg Greater Glider It relates the story of this extraordinary group of animals which possess a fascinating array of adaptations to their nocturnal and gliding existence

**American and Australasian Marsupials** Nilton C. Cáceres, Christopher R. Dickman, 2023-06-30 This book focuses on the evolution

biogeography systematics taxonomy and ecology of New World and Australasian marsupials greatly expanding the current knowledge base There are roughly 140 species of New World marsupials of which the opossum is the best known Thanks to recent research there is now an increasing amount of understanding about their evolution biogeography systematics ecology and conservation in the Americas especially in South America There are also some 270 marsupial species in the Australasian region many of which have been subject to research only in recent years Based on this information and the authors extensive research this book provides comprehensive insights into the world s marsupials It will appeal to academics and specialized researchers students of zoology paleontology evolutionary biology ecology physiology and conservation as well as interested non experts

*The Action Plan for Australian Mammals 2012* Andrew Burbidge, John Woinarski, Peter Harrison, 2014-06-02

The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals It complements The Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater These authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas For all the mammal taxa about 300 species and subspecies considered Extinct Threatened Near Threatened or Data Deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data The book also presents the current conservation status of each taxon under Australian legislation what additional information is needed for managers and the required management actions Recovery plans where they exist are evaluated The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included All accounts include maps based on the latest data from Australian state and territory agencies from published scientific literature and other sources The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action However it also shows that where guided by sound knowledge management capability and resourcing and longer term commitment there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia s heritage For such a legacy to endure our society must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised It is in this spirit that

this account is offered      **The Handbook of New Zealand Mammals** Carolyn King, David Forsyth, 2021-01-20 The Handbook of New Zealand Mammals is the only definitive reference on all the land breeding mammals recorded in the New Zealand region including the New Zealand sector of Antarctica It lists 65 species including native and exotic wild and feral living and extinct residents vagrants and failed introductions It describes their history biology and ecology and brings together comprehensive and detailed information gathered from widely scattered or previously unpublished sources The description of each species is arranged under standardised headings for easy reference Because the only native land breeding mammals in New Zealand are bats and seals the great majority of the modern mammal fauna comprises introduced species whose arrival has had profound effects both for themselves and for the native fauna and flora The book details changes in numbers and distribution for the native species and for the arrivals it summarises changes in habitat diet numbers and size in comparison with their ancestral stocks and some of the problems they present to resource managers For this third edition the text and references have been completely updated and reorganised into Family chapters The colour section includes 14 pages of artwork showing all the species described and their main variations plus two pages of maps

**Queensland's Threatened Animals** Lee K Curtis, 2012-02-01 Queensland is home to 70% of Australia's native mammals 226 species over 70% of native birds 630 species just over half of the nation's native reptiles 485 and native frogs 127 and more than 11 000 native plant species Hundreds of these have a threatened status in Queensland In order for Queensland to maintain and recover a healthy biodiversity we must address the serious problems faced by our natural environment habitat loss inappropriate land management change in fire regimes pollution of natural resources proliferation of invasive species and climate change This book features up to date distribution data photos and maps for most of Queensland's threatened animals It also includes a comprehensive list of resources with key state national and international organisations involved in the recovery and management of threatened species Queensland's Threatened Animals will provide vital information to scientists educators business entities government agencies students community groups environmental NGOs regional NRMs and potential volunteers      [Mammalia](#) Bannister, 2024-02-19      **Medicine of Australian Mammals** Larry

Vogelnest, Rupert Woods, 2008-08-18 In Medicine of Australian Mammals more than 30 experts present the most current information available on the medical management of all taxa of Australian native mammals This comprehensive text is divided into two parts The first includes chapters on general topics relevant to the medical management of captive and free ranging Australian native mammals such as veterinary considerations for the rescue treatment rehabilitation and release of wildlife veterinary aspects of hand rearing orphaned marsupials marine mammal strandings and the role of the veterinarian and wildlife health investigation and necropsy of Australian mammals The second part covers the medicine of specific taxa of Australian native mammals Detailed information on taxonomy distribution biology anatomy physiology reproduction husbandry nutrition physical and chemical restraint clinical pathology hand rearing diseases zoonoses therapeutics

### **Genes, Language, & Culture**

**History in the Southwest Pacific** Jonathan S. Friedlaender, 2007-04-19 The broad arc of islands north of Australia that extends from Indonesia east towards the central Pacific is home to a set of human populations whose concentration of diversity is unequaled elsewhere Approximately 20% of the worlds languages are spoken here and the biological and genetic heterogeneity among the groups is extraordinary Anthropologist W W Howells once declared diversity in the region so Protean as to defy analysis However this book can now claim considerable success in describing and understanding the origins of the genetic and linguistic variation there In order to cut through this biological knot the authors have applied a comprehensive battery of genetic analyses to an intensively sampled set of populations and have subjected these and complementary linguistic data to a variety of phylogenetic analyses This has revealed a number of heretofore unknown ancient Pleistocene genetic variants that are only found in these island populations and has also identified the genetic footprints of more recent migrants from Southeast Asia who were the ancestors of the Polynesians The book lays out the very complex structure of the variation within and among the islands in this relatively small region and a number of explanatory models are tested to see which best account for the observed pattern of genetic variation here The results suggest that a number of commonly used models of evolutionary divergence are overly simple in their assumptions and that often human diversity has accumulated in very complex ways

### Practical Conservation Biology

David Lindenmayer, Mark Burgman, 2005-10-26 Practical Conservation Biology covers the complete array of topics that are central to conservation biology and natural resource management thus providing the essential framework for under graduate and post graduate courses in these subject areas Written by two of the world s leading environment experts it is a must have reference for environment professionals in government non government and industry sectors The book reflects the latest thinking on key topics such as extinction risks losses of genetic variability threatening processes fire effects landscape fragmentation habitat loss and vegetation clearing reserve design sustainable harvesting of natural populations population viability analysis risk assessment conservation biology policy human population growth and its impacts on biodiversity Practical Conservation Biology deals primarily with the Australian context but also includes many overseas case studies The book is the most

comprehensive assessment of conservation topics in Australia and one of the most comprehensive worldwide Winner of the 2006 Whitley Award for Best Conservation Text Tree Hollows and Wildlife Conservation in Australia Philip Gibbons, David Lindenmayer, 2002-04-05 More than 300 species of Australian native animals mammals birds reptiles and amphibians use tree hollows but there has never been a complete inventory of them Many of these species are threatened or are in decline because of land use practices such as grazing timber production and firewood collection All forest management agencies in Australia attempt to reduce the impact of logging on hollow dependent fauna but the nature of our eucalypt forests presents a considerable challenge In some cases tree hollows suitable for vertebrate fauna may take up to 250 years to develop which makes recruiting and perpetuating this resource very difficult within the typical cycle of human induced disturbance regimes Tree Hollows and Wildlife Conservation in Australia is the first comprehensive account of the hollow dependent fauna of Australia and introduces a considerable amount of new data on this subject It not only presents a review and analysis of the literature but also provides practical approaches for land management **The Australian Zoologist**, 2005 Vols 1 7 and 16 include reports and proceedings of the Royal Zoological Society of New South Wales for 1913 1932 33 and 1969 70
