Pliskoff, MARYLAND UNIV COLLEGE PARK., 1964 This work has dealt primarily with some of the behavioral effects of brain stimulation reward in contrast with the more usual emphasis on physiological and anatomical correlates A technique was developed assessing reward value the technique involves the use of a 2 member behavioral chain in which a schedule of reinforcement is programmed on one response lever and selfstimulation is programmed on another response lever The second stimulation lever is not accessible to the rat until the programmed response requirement on the first lever is completed Performance characteristics on the first lever free of the side effects of brain stimulation per se reflect the behavioral reward value of the second chain member It was found that substantial behavior output can be maintained on the first lever if twenty to thirty stimulation reinforced presses are permitted on the second lever The report presents results with regard to those variables and describes findings in experiments designed to make a direct comparison between food and brain stimulation reward Author      **The Brain and Reward** Edmund T. Rolls, 1975      **The Neuropharmacological Basis of Reward** Jeffrey M. Liebman, Steven J. microinjection and self administration of drugs as well as advanced new techniques for measuring the specificity of drug effects on reinforcement are thoroughly explained and future research directions outlined
