Laboratory Dimitris Psillos,H. Niedderer,2006-05-05 Scope of the book There is an on going debate regarding the role of labwork in science education which dates back several decades and which illustrates the conviction and interest of teachers researchers and policy makers world wide in the value of laboratory work for understanding science This is evident in more recent books and studies regarding the laboratory which mainly refer to countries with a considerable tradition in practical work in science education Woolnough Alsop 1985 Hodson 1993 Hegarthy Hazel 1990 Wellington 2000 Yet in discussing research studies on labwork several authors express their concern about its effectiveness in facilitating students understanding of various aspects of scientific inquiry They point out a comprehensive re conceptualisation of the aims of labwork and as a consequence of investigating what the students actually learn in different contexts Lazarowitz Tamir 1994 Tobin Tippins 1993 Lunetta 1998 It has also been argued that the relationship between instructional activities and student learning in labwork needs more attention than it has been given in science education research Leach Paulsen 1999 It appears that the case for research based labwork emerges in several quarters in science education particularly among researchers This book presents and discusses a variety of laboratory practices and their effectiveness The studies take into account recent theoretical developments and empirical results concerning students understanding of scientific inquiry A whole chapter is devoted to technological advances offering new learning opportunities for the students and teaching facilities for the teacher **Handbook of Laboratory Animal Science, Volume III, Third Edition** Jann Hau,Steven J.

Explanatory Particularism in Scientific Practice Melinda Bonnie Fagan, 2025-03-23 Explanatory Particularism in Scientific Practice offers a novel community centric account of scientific explanation On this view explanations are products of collaborative activity in particular communities Philosophers of science studying explanation have traditionally seen their task as analyzing the common or fundamental core of explanations across the sciences Melinda Bonnie Fagan takes the opposite view diversity of explanations across the sciences is a basic feature of scientific practice A scientific community produces explanations that advance understanding of some target of interest but just what features advance understanding and what understanding amounts to in practice varies widely over time and across scientific communities This particularist approach brings new problems and questions to the fore especially concerning interdisciplinarity how if at all do explanation and understanding get beyond the boundary of a particular community The particularist account also has implications bearing on the nature of understanding the unity of science objectivity and science society relations The argument is elaborated using detailed case studies of explanatory model connection or lack thereof immunology and epidemiology models in the COVID 19 pandemic and the explanatory ambitions of systems biology using the example of stem cell development The argument concludes with an open ended list of potential future case studies
