Hayes' Principles and Methods of Toxicology, Sixth Edition A. Wallace Hayes, Claire L. Kruger, 2014-10-10 Hayes' *Principles and Methods of Toxicology* has long been established as a reliable reference to the concepts, methodologies, and assessments integral to toxicology. The new sixth edition has been revised and updated while maintaining the same high standards that have made this volume a benchmark resource in the field. With new authors and new chapters that address the advances and developments since the fifth edition, the book presents everything toxicologists and students need to know to understand hazards and mechanisms of toxicity, enabling them to better assess risk. The book begins with the four basic principles of toxicology: dose matters, people differ, everything transforms, and timing is crucial. The contributors discuss various agents of toxicity, including foodborne solvents, crop protection chemicals, radiation, and plant and animal toxins. They examine various methods for defining and measuring toxicity in a host of areas, including genetics, carcinogenicity, toxicity in major body systems, and the environment. This new edition contains an expanded glossary reflecting significant changes in the field. New topics in this edition include the importance of dose response, systems toxicology, food safety, the humane use and care of animals, and neurotoxicology. The comprehensive coverage and clear writing style make this volume an invaluable text for students and a one-stop reference for professionals.

The Cognitive Neurosciences, sixth edition David Poeppel, George R. Mangun, Michael S. Gazzaniga, 2020-04-21 The sixth edition of the foundational reference on cognitive neuroscience with entirely new material that covers the latest research, experimental approaches, and measurement methodologies. Each edition of this classic reference has proved to be a benchmark in the developing field of cognitive neuroscience. The sixth edition of *The Cognitive Neurosciences* continues to chart new directions in the study of the biological underpinnings of complex cognition, the relationship between the structural and physiological mechanisms of the nervous system, and the psychological reality of the mind. It offers entirely new material reflecting recent advances in the field, covering the latest research, experimental approaches, and measurement methodologies. This sixth edition treats such foundational topics as memory, attention, and language, as well as other areas including computational models of cognition, reward and decision making, social neuroscience, scientific ethics, and methods advances. Over the last twenty-five years, the cognitive neurosciences have seen the development of sophisticated tools and methods, including computational approaches that generate enormous data sets. This volume deploys these exciting new instruments but also emphasizes the value of theory, behavior observation, and other time-tested scientific habits. Section editors: Sarah Jayne Blakemore and Ulman Lindenberger, Kalanit Grill-Spector and Maria Chait, Tom S. Ryan and Charan Ranganath, Sabine Kastner and Steven Luck, Stanislas Dehaene and Josh McDermott, Rich Ivry and John Krakauer, Daphna Shohamy and Wolfram Schultz, Danielle Bassett and Nikolaus Kriegeskorte, Marina Bedny and Alfonso Caramazza, Liina Pylkkänen and Karen Emmorey, Mauricio Delgado and Elizabeth Phelps, Anjan Chatterjee and Adina Roskies.
