Renewable Energy Systems from Biomass Vladimir Strezov, Hossain Md. Anwar, 2018-11-16 New innovations are needed for the invention of more efficient affordable sustainable and renewable energy systems as well as for the mitigation of climate change and global environmental issues In response to a fast growing interest in the realm of renewable energy Renewable Energy Systems Efficiency Innovation and Sustainability identifies a need to synthesize relevant and up to date information in a single volume This book describes a systems approach to renewable energy including technological political economic social and environmental viewpoints as well as policies and benefits This unique and concise text encompassing all aspects of the field in a single source focuses on truly promising innovative and affordable renewable energy systems Key Features Focuses on innovations in renewable energy systems that are affordable and sustainable Collates the most relevant and up to date information on renewable energy systems in a single and unique volume Discusses

lifecycle assessment cost and availability of systems Emphasizes bio related topics Provides a systems approach to the renewable energy technologies and discusses technological political economic social and environmental viewpoints as well as policies

**Biofuels, Solar and Wind as Renewable Energy Systems** D. Pimentel, 2008-07-22 The petroleum age began about 150 years ago Easily available energy has supported major advances in agriculture industry transportation and indeed many diverse activities valued by humans Now world petroleum and natural gas supplies have peaked and their supplies will slowly decline over the next 40 50 years until depleted Although small amounts of petroleum and natural gas will remain underground it will be energetically and economically impossible to extract In the United States coal supplies could be available for as long as 40 50 years depending on how rapidly coal is utilized as a replacement for petroleum and natural gas Having been comfortable with the security provided by fossil energy especially petroleum and natural gas we appear to be slow to recognize the energy crisis in the U S and world Serious energy conservation and research on viable renewable energy technologies are needed Several renewable energy technologies already exist but sound research is needed to improve their effectiveness and economics Most of the renewable energy technologies are influenced by geographic location and face problems of intermittent energy supply and storage Most renewable technologies require extensive land a few researchers have even suggested that one half of all land biomass could be harvested in order to supply the U S with 30% of its liquid fuel Some optimistic investigations of renewable energy have failed to recognize that only 0.1% of the solar energy is captured annually in the U S
