It illustrates the benefit of the principles of geriatrics in the management of cancer in the older individual. This volume provides a frame of reference for practitioners of any specialties involved in the management of older patients and for oncologists involved in the management of cancer of older individuals. It is a source for basic and clinical scientists exploring the interactions and emerging information of cancer and aging.

Topics in Biomedical Gerontology Pramod C. Rath, Ramesh Sharma, S. Prasad, 2016-10-20 This book presents a collection of articles on various aspects of current research on aging. These include model systems, cellular, biochemical, and molecular aspects of experimental aging research as well as selected intervention studies on age-related diseases. Aging is a global challenge to human society. Children are always in a hurry to become adults while adults produce offspring and add to the gene pool. However, after adulthood or the attainment of reproductive maturity, all physiological parameters of the living organism start to undergo the aging process. Old age sets in slowly but surely and usually continues for a prolonged period. If vigor and vitality are the main advantages of adulthood, old age offers the rewards of experience and maturity. Biologists ask questions such as: Why do we age? How do we become old? Is it possible to slow down, postpone, or even prevent aging? In turn, medical experts ask: What are the diseases associated with old age? Are there medicines that can help affected elderly patients? In fact, both groups are asking themselves: how can we add more health to old age? Healthy aging is the dream of every individual. But to achieve this, it is fundamental that we first understand the cellular, biochemical, and molecular basis of the aging process in mammalian cells, tissues, and intact living organisms which can serve as experimental model systems in Biomedical Gerontology. Once the biology of aging is understood at the genetic and molecular levels, interventional approaches to aging and its associated diseases may be easier to plan and implement at the preclinical level.

Encyclopedia of Biomedical Gerontology, 2019-11-20 Encyclopedia of Biomedical Gerontology Three Volume Set presents a wide range of topics ranging from what happens in the body during aging, the reasons and mechanisms relating to those age-related changes, and their clinical, psychological, and social modulators and determinants. The book covers the biological and medical aspects of gerontology within the general framework of the biological basis of assessing age, biological mechanisms of aging, age-related changes in biological systems, human age-related diseases, the biomedical practicality and impracticality of interventions, and finally the ethics of intervention. Provides a one-stop resource to information written by world-leading scholars in the field of biomedical gerontology. Fills a critical gap of information in a field that has seen significant progress in the last 10 years.
