Cantor,Paul Reinhard Schimmel,1980 Molecular Biophysics for the Life Sciences Norma Allewell,Linda O. Narhi,Ivan Rayment,2013-09-28 This volume provides an overview of the development and scope of molecular biophysics and in depth discussions of the major experimental methods that enable biological macromolecules to be studied at atomic resolution It also reviews the physical chemical concepts that are needed to interpret the experimental results and to understand how the structure dynamics and physical properties of biological macromolecules enable them to perform their biological functions Reviews of research on three disparate biomolecular machines DNA helicases ATP synthases and myosin illustrate how the combination of theory and experiment leads to new insights and new questions

Biophysical Chemistry Charles R. Cantor, Paul R. Soyfer, Vladimir N. Potaman, 2012-12-06 The ability of DNA to exist in configurations other than its classical double stranded form has been known for many years There has been a spectacular recent surge of interest in these forms notably in the three stranded or triple helical form Triplex like nucleic acids are now known to exist in vivo and may well participate in significant biological processes Interest in triple helical nucleic acids has been greatly stimulated by their potential exploitation to control gene expression serve as tools in genome mapping strategies etc The authors have written an encyclopedic introduction to nucleic acid triplexes based on many years of familiarity with the topic The book includes information on chemistry conformation physical properties applications and hypotheses about the biological role of triplexes It pays particular attention to the different methods for investigating these molecules a feature which will be welcomed by Advances in Biophysical Chemistry Volume 5 BUSH,1996-01-08 Advances in Biophysical Chemistry those new to the field Volume 5 provides reviews of important topics in physical and structural biochemistry. The volume begins with a review of the chemical reactivity of DNA and its relationship to the dynamic nature of DNA conformation and its dependence on base sequence The underlying chemistry has become extremely important to many researchers who use a host of chemical footprinting techniques to study biologically relevant complexes of DNA This is followed by separate chapters that cover an innovative application of fluorescence energy transfer to investigate the dynamics of complex glycopeptides the NMR of cations which bind to DNA providing a picture of DNA conformation and dynamics which is complementary to that provided

by 1H NMR spectroscopy the use of NMR to study electron transfer reactions between cytochrome c peroxidase and cytochrome c methods for analysis of data on O2 binding by hemoglobin and experimental methods for obtaining data on protein association Environmental Monitoring and Biodiagnostics of Hazardous Contaminants M. Healy, D.L. Wise, Murray Moo-Young, 2013-03-14 In recent years public awareness of the long term toxic affects heavy metal ions in waters and wastewaters has increased significantly Environmental agencies have been imposing more and more stringent discharge limits on industries involved in processes using metal ions Numerous industries produce aqueous effluents con taining metal ions and particularly copper and cadmium Copper sulfate is used on a large scale in the electroplating industries In addition copper salts are used as fungicides timber preservatives insecticides paint corrosion inhibitors and in dyestuffs Cadmium is used in the manufacture of nickel cadmium batteries as a corrosion inhibitor and control rods in the nuclear industry The European Com munity has listed cadmium as one of the most dangerous metal due to its toxicity persistence and bioaccumulation in List 1 of its Directive 76 464 EEC Therefore it is important that methods for the removal of these metal ions are found and that the mechanism of removal is characterized and understood A number of adsorb ents have been identified which are capable of removing copper Panday et al 1985 Ho et al 1996 Low and Lee 1987 Low et al 1993 Quek et aI 1998 and cadmium Battacharya and Venkobachar 1984 Namasivayam and Ranganathan 1995 Periasamy and Namasivayam 1994 from aqueous solutions Sorption kin etic models have been proposed for some systems

Polysaccharides Severian Dumitriu, 2004-11-30 Completely revised and expanded to reflect the latest advancements in the field Polysaccharides Structural Diversity and Functional Versatility Second Edition outlines fundamental concepts in the structure function chemistry and stability of polysaccharides and reveals new analytical techniques and applications currently impacting the cosmetic medicinal chemical and biochemical industries The authoritative book discusses polysaccharides utilized in medical applications such as polysaccharide based hydrogels polysialic acids proteoglycans glycolipids and anticoagulant polysaccharides renewable resources for the production of various industrial chemicals and engineering plastics polysaccharides and more **Pectins and Pectinases** J. Visser, A.G.J. Voragen, 1996-12-06 Pectins are one of the classes of complex structural plant cell wall polysaccharides. They are localized in the middle lamella and primary cell wall of higher plants Pectins have a long standing use as gelling agents whereas their enzymatic degradation or modification plays an important role in the processing of agricultural crops and the manufacturing of foods and beverages Progress in pectin and pectinase research has been most prominent in two areas over the past 5 years. The first one concerns the analysis and elucidation of the complex chemical structure of pectin and identification of novel enzymes involved in the degradation of these structures The second area concerns the mode of action and the 3 dimensional structure of various pectin degrading enzymes as well as the cloning of a large number of genes encoding enzymes involved in pectin degradation and modification This book covers the following topics First the structural physical and chemical properties of pectin are

treated followed by information about its biosynthesis and about the biological effects of pectin and its degradation products in biological systems such as plant pathogen interactions and human nutrition Identification of novel enzymes the mode of action of different pectinases and the 3 D structure of bacterial pectate lyases forms the second block This is followed by the genetics and regulation of pectinase biosynthesis in saprophytic and phytopathogenic microbial systems as well as in plant systems Finally developments in pectin manufacturing and application of pectinases in traditional food beverage and novel technologies are treated This book is meant for those actively involved in fundamental and applied aspects of pectin and pectinase research but it is also of value for those interested in plant cell wall biosynthesis and architecture phytopathology food technology and human nutrition This book not only reflects the present status of research in the field but it will turn out to be a very useful reference work as well DNA Computing Natasa Jonoska, Nadriaan C. Seeman, 2003-08-01 This book constitutes the thoroughly refereed post proceedings of the 7th International Workshop on DNA Based Computers DNA7 held in Tampa Florida USA in June 2001 The 26 revised full papers presented together with 9 poster papers were carefully reviewed and selected from 44 submissions The papers are organized in topical sections on experimental tools theoretical tools probabilistic computational models computer simulation and sequence design algorithms experimental solutions nano tech devices biomimetic tools new computing models and splicing systems and membranes DNA Based Computers V Erik Winfree, 2000 This proceedings volume presents the talks from the Fifth Annual Meeting on DNA Based Computers held at MIT The conference brought together researchers and theorists from many disciplines who shared research results in biomolecular computation Two styles of DNA computing were explored at the conference 1 DNA computing based on combinatorial search where randomly created DNA strands are used to encode potential solutions to a problem and constraints induced by the problem are used to identify DNA strands that are solution witnesses and 2 DNA computing based on finite state machines where the state of a computation is encoded in DNA which controls the biochemical steps that advance the DNA based machine from state to state Featured articles include discussions on the formula satisfiability problem self assembly and nanomachines simulation and design of molecular systems and new theoretical approaches
