African Landscapes Michael Bollig, Olaf Bubenzer, 2009-06-12 Landscape studies provide a crucial perspective into the interaction between humans and their environment shedding insight on social cultural and economic topics The research explores both the way that natural processes have affected the development of culture and society as well as the ways that natural landscapes themselves are the product of historical and cultural processes Most previous studies of the landscape selectively focused on either the natural sciences or the social sciences but the research presented in African Landscapes bridges that gap This work is unique in its interdisciplinary scope Over the past twelve years the contributors to this volume have participated in the collaborative research center ACACIA Arid Climate Adaptation and Cultural Innovation in Africa which deals with the relationship between cultural processes and ecological dynamics in Africa s arid areas The case studies presented here come from mainly Sahara

Sahel and southwestern Africa and are all linked to broader discussions on the concept of landscape and themes of cultural anthropological geographical botanical sociological and archaeological interest The contributions in this work are enhanced by full color photographs that put the discussion in context visually **Garden Plants Taxonomy** Bijan Dehgan, 2023-04-05 Horticulture has remained far behind in understanding of botanical principles Recent phylogenetic DNA based reorganization of higher plants has revolutionized taxonomic treatments of all biological entities even when morphology does not completely agree with their organization This book is an example of applying principals of botanical phylogenetic taxonomy to assemble genera species and cultivars of 200 vascular plant families of ferns gymnosperms and angiosperms that are cultivated for enhancement of human living space homes gardens and parks The emphases are on cultivated species but examples of some plants are often shown in the wild and in landscapes In providing descriptions it is assumed that students and other interested individuals have no background in general botany plant characteristics or nomenclature Fundamental features of all plant groups discussed are fully illustrated by original watercolor drawings or photographs Discussion of the families is grounded on recent botanical phylogenetic treatments which is based on common ancestry monophyly Of course phylogenetic taxonomy is not a new concept and was originally based on morphological characteristics it is the DNA based phylogeny that has revolutionized modern biological classifications In practical terms this book represents the horticultural treatment that corresponds to phylogenetic based botanical taxonomy to which is added cultigens and cultivated genera and species Hence the harmony between horticultural and botanical taxonomy This book covers phylogenetic based taxonomy of Angiosperms Eudicots A companion volume covers Ferns Gymnosperms and Angiosperms Monocots **Words and Ideas** William J. Dominik, 2002-01-01 Unlike most etymology textbooks this one presents the words studied in the context of the ideas in which the words functioned Instead of studying endless lists of word roots suffixes and prefixes in isolation the words are enlivened by their social literary and cultural media Features Chapters on Mythology Medicine Politics and Law Commerce and Economics Philosophy and Psychology History Introduction to word building Exercises throughout Illustrations of ancient artifacts Clever cartoons on word origins Glossary of English words and phrases **External Influences on English** D. Gary Miller, 2012-08-02 In this fascinating history of the influences on English during the first thousand years of its formation the author shows when and why the Anglo Saxons began to borrow words from Latin and Greek and the effects of contact with the Vikings Celts and French A book of enduring value to everyone interested in the history of English **Categories of Word Formation and Borrowing** Renáta Panocová, 2015-09-04 This book presents the onomasiological approach to word formation and applies it to neoclassical formations using data taken from English and Russian medical terminology The phenomenon of neoclassical formations is challenging for morphological theory because it raises questions about determining its boundaries as a distinct category The difficulties of differentiating between compounding and affixation between blending and compounding and between word formation and borrowing

represent key problematic areas here The basic underlying hypothesis considered in this book is that the position of neoclassical formations in English and Russian is different It will be argued that whereas in English neoclassical word formation is a system of word formation Russian has only individual borrowings This hypothesis and the theoretical problems it entails are viewed from the perspective of tekauer s onomasiological theory of word formation tekauer s theory takes the needs of the speech community as its starting point in explaining word formation In this theory the different analyses of neoclassical formations in English and Russian can be accounted for in an intuitively appealing and theoretically elegant way As naming needs are central word formation and borrowing can be analysed as alternative responses activating different components of the language system
