Sharma, 2010 This book describes and evaluates animal biotechnology and its application in veterinary medicine and pharmaceuticals as well as improvement in animal food production Transgenic technologies are used for improving milk production and the meat in farm animals as well as for creating models of human diseases Transgenic animals are used for the production of proteins for human medical use Biotechnology is applied to facilitate xenotransplantation from animals to humans Genetic engineering is done in farm animals and nuclear transfer technology has become an important and preferred method for cloning animals Biotechnology has potential applications in the management of several animal diseases such as foot and mouth disease classical swine fever avian flue and bovine spongiform encephalopathy The most important biotechnology based products consist of vaccines particularly genetically engineered or DNA vaccines Gene therapy for diseases of pet animals is a fast developing area because many of the technologies used in clinical trials humans were developed in animals and many of the diseases of cats and dogs are similar to those in humans RNA interference technology is now being applied for research in veterinary medicine Molecular diagnosis is assuming an important place in veterinary practice Polymerase chain reaction and its modifications are considered to be important Fluorescent in situ hybridization and enzyme linked immunosorbent assays are also widely used Newer biochip based technologies and biosensors are also finding their way in veterinary diagnostics This book is an attempt to unravel the mysteries of biotechnology as it affects animal health and production

Biotechnology Barnum, 1997 Designed for use in introductory biotechnology courses or as a supplement in molecular biology cell biology genetics or microbiology courses Barnum s text gives readers a broad view of biotechnology integrating historical and modern biotechnology topics It then proceeds to describe the processes and methods used to manipulate living organisms or

the substances and products from these organisms for medical agricultural and industrial purposes Detail illustrates the technology and how it s applied including discussions on the implications of biotechnology in such areas as gene therapy medicine agriculture marine biology and forensics The author also uses many examples and case studies to explain topics

Biotechnology Susan R. Barnum,1998 Biotechnology encompasses the processes and methods used to manipulate living organisms or the substances and products from these organisms for medical agricultural and industrial purposes Barnum not only supplies the big picture of the biotechnology field but provides in depth details to illustrate the technology Traditionally biotechnology texts have been too narrow in coverage and focused only on the methods used in biotechnology In contrast Barnums text extensively covers the topics with lots of examples and case studies and discusses the implications in areas such as gene therapy medicine agriculture marine biology and forensics Designed to grab the interest of students and make the topics relevant to them Barnums text is an excellent integration of historical and modern biotechnology topics *Ser*
