Westervelt, Jessy W. Grizzle, Christine Chevallereau, Jun Ho Choi, Benjamin Morris, 2018-10-03 Bipedal locomotion is among the most difficult challenges in control engineering Most books treat the subject from a quasi static perspective overlooking the hybrid nature of bipedal mechanics Feedback Control of Dynamic Bipedal Robot Locomotion is the first book to present a comprehensive and mathematically sound treatment of feedback design for achieving stable agile and efficient locomotion in bipedal robots In this unique and groundbreaking treatise expert authors lead you systematically through every step of the process including Mathematical modeling of walking and running gaits in planar robots Analysis of periodic orbits in hybrid systems Design and analysis of feedback systems for achieving stable periodic motions Algorithms for synthesizing feedback controllers Detailed simulation examples Experimental implementations on two bipedal test beds The elegance of the authors approach is evident in the marriage of control theory and mechanics uniting control based presentation and mathematical custom with a mechanics based approach to the problem and computational rendering Concrete examples and numerous illustrations complement and clarify the mathematical discussion A supporting Web site offers links to videos of several experiments along with MATLAB code for several of the models This one of a kind book builds a solid understanding of the

theoretical and practical aspects of truly dynamic locomotion in planar bipedal robots **Biped Robots** Armando Carlos De Pina Filho, 2011-02-04 Biped robots represent a very interesting research subject with several particularities and scope topics such as mechanical design gait simulation patterns generation kinematics dynamics equilibrium stability kinds of control adaptability biomechanics cybernetics and rehabilitation technologies We have diverse problems related to these topics making the study of biped robots a very complex subject and many times the results of researches are not totally satisfactory However with scientific and technological advances based on theoretical and experimental works many researchers have collaborated in the evolution of the biped robots design looking for to develop autonomous systems as well as to help in rehabilitation technologies of human beings Thus this book intends to present some works related to the study of biped robots developed by researchers worldwide Autonomous Systems – Self-Organization, Management, and Control Bernd Mahr, Huanye Sheng, 2008-09-15 The 2008 TUB SJTU joint workshop on Autonomous Systems Self Organization Management and Control was held on October 6 2008 at Shanghai Jiao Tong University Shanghai China The workshop sponsored by Shanghai Jiao Tong University and Technical University of Berlin brought together scientists and researchers from both universities to present and discuss the latest progress on autonomous systems and its applications in diverse areas Autonomous systems are designed to integrate machines computing sensing and software to create intelligent systems capable of interacting with the complexities of the real world Autonomous systems represent the physical embodiment of machine intelligence Topics of interest include but are not limited to theory and modeling for autonomous systems organization of autonomous systems learning and perception complex systems multi agent systems robotics and control applications of autonomous systems *Fast Motions in Biomechanics and Robotics* Moritz Diehl, Katja Mombaur, 2007-07-13 In the past decades much progress has been made in the field of walking robots The current state of technology makes it possible to create humanoid robots that nearly walk like a human being climb stairs or avoid small stacles However the dream of a robot running as fast and as elegantly as a human is still far from becoming reality Control of such fast motions is still a big technological issue in robotics and the maximum running speed of contemporary robots is still much smaller than that of human track runners The conventional control approach that most of these robots are based on does not seem to be suitable to increase the running speeds up to a biological level In order to address this challenge we invited an interdisciplinary community of researchers from robotics biomechanics control engineering and applied mathematics to come together in Heidelberg at the Symposium Fast Motions in Biomechanics and Robotics Optimization Feedback Control which was held at the International Science Forum IWH on September 7 9 2005 The number of participants in this symposium was kept small in order to promote discussions and enable a fruitful exchange of ideas **Modeling, Simulation and Optimization of Bipedal Walking** Katja Mombaur, Karsten Berns, 2013-02-28 The model based investigation of motions of anthropomorphic systems is an important interdisciplinary research topic involving specialists from many fields such as
