Biochemistry Of Polypeptide Hormones:

The Biochemistry of the Polypeptide Hormones M. Wallis, S. L. Howell, Keith William Taylor, 1985 The Biochemistry of Polypeptide Hormones is intended to meet the needs particularly of advanced undergraduates preclinical students and postgraduates and provide an introduction to the research literature All the main groups of polypeptide hormones are covered and special chapters deal with structure function relationships hormone receptors the role of second messengers and the applications of recombinant DNA technology

Hormonal Proteins and Peptides Choh Hao Li, 2014-05-12 Hormonal Proteins and Peptides Volume II reviews extensively the knowledge on the biology and chemistry of the protein and peptide hormones This book presents the structures of the various protein and peptide hormones Organized into three chapters this volume begins with an overview of the various aspects of the structure and function of adrenocorticotropin hormone ACTH with reference to the ability to stimulate the adrenal gland of the rat amphibian melanophores and adipose tissues of the rat and rabbit This text then reviews the isolation purification and elucidation of the amino acid sequence of corticotropins from various species Other chapters consider the structures of porcine and human ACTH This book discusses as well the working hypothesis for studies on the secondary tertiary structure of peptide hormones The final chapter deals with the abbreviations used for amino acids and protecting groups This book is a valuable resource for peptide chemists biologists biochemists and research workers

The Role of Peptide Hormones in Insect Physiology, Biochemistry, and Molecular Biology Processes Dov Borovsky, Yonggyun Kim, Klaus H. Hoffmann, 2021-03-22 Protein and Peptide Hormones John G. Pierce, 1982 Cellular Peptide Hormone Synthesis and Secretory Pathways Jens F. Rehfeld, Jens R.

Bundgaard, 2010-03-10 The concept of hormonal regulation using intercellular peptide messengers dates back to the discovery of secretin in 1902 The concept was simple A peptide is released from specific hormone producing cells endocrine cells into circulation upon stimulation of the cells The peptide hormone travels via blood to its target the cells of which are equipped with specific receptors for high affinity binding of the particular peptide hormone Receptor binding subsequently elicits action of the target cells This concept has been seriously challenged by modern biochemistry and cell biology Thus it is now well established that the gene of a specific peptide hormone may be expressed in different types of endocrine cells in neurons and in some instances also in adipocytes myocytes osteoblasts and immune cells Today only a few hormones including the old master hormone insulin represent the original endocrine paradigm Instead the widespread cellular synthesis now raises the question of how the body maintains the regulation of its functions by peptide hormones when a hormone may originate from a variety of cells

Biochemical Actions of Hormones V12 Gerald Litwack, 2012-12-02 Biochemical Actions of Hormones Volume XII is a compendium of papers discussing aspects of molecular biology with regard to hormone action and to certain hormone receptors One paper discusses the different approaches and strategies that are used in determining the amino acid sequence The paper also describes the structural organization of polyprotein precursors

such as the peptide chemistry approach or the nucleic acid approach Another paper investigates the regulation of prolactin biosynthesis by peptide hormones as a model for peptidergic regulation of gene expression The paper defines in detail which components of the biosynthetic machinery are being regulated by the polypeptide hormones One paper also analyzes the molecular biology of the metallothioneins focusing on the glucocorticoid regulation of metallothioneins genes Experiments show that when the mouse MT I gene is activated in lymphoid cells or transferred to other cells it still retains information needed in metal regulated expression though glucocorticoids can no longer regulate the same gene Other papers discuss the purification and properties of the nerve growth factor receptor and the thyrotropin receptor Micro biologists biochemists molecular biologists cellular biologists endocrinologists and scientists involved in cell research will find this collection valuable

The Cytochemical Bioassay of Polypeptide Hormones J. Chayen, 2012-12-06 The cytochemical bioassay system was described in a short abstract in 1971 and more fully in the cytochemical bioassay of corticotrophin in 1972 Since then cytochemical bioassays have been described for several polypeptide hormones and these assays are already widely used It is expedient that the subject should be reviewed as it is in this monograph by one writer who has had the good fortune to have taken part in the growth of cytochemistry from its early origins to its present position as the basis of possibly the most sensitive bioassay system currently available However it should be noted that major contributions have been made by many both to the development of the subject and to the establishment of the bioassays The object of this preface is to try to give some perspective to the growth of this subject and to record that the cytochemical bioassay system has been fostered by many outstanding scientists in an atmosphere of remarkable goodwill To begin with there could have been no cytochemical bioassays until cytochemistry had been converted from its rather unsure origins into a precise and quantitative form of cellular biochemistry This was done with skill and enthusiastic dedication by my colleagues Dr Lucille Bitensky Dr F P Altman Dr R G L W Poulter and Mr A A Silcox first at the Royal College of Butcher Dr *Cellular Peptide Hormone Synthesis and Secretory Pathways* Jens F. Rehfeld, Jens R. Bundgaard, 2010-10-22 The concept of hormonal regulation using intercellular peptide messengers dates back to the discovery of secretin in 1902 The concept was simple A peptide is released from specific hormone producing cells endocrine cells into circulation upon stimulation of the cells The peptide hormone travels via blood to its target the cells of which are equipped with specific receptors for high affinity binding of the particular peptide hormone Receptor binding subsequently elicits action of the target cells This concept has been seriously challenged by modern biochemistry and cell biology Thus it is now well established that the gene of a specific peptide hormone may be expressed in different types of endocrine cells in neurons and in some instances also in adipocytes myocytes osteoblasts and immune cells Today only a few hormones including the old master hormone insulin represent the original endocrine paradigm Instead the widespread cellular synthesis now raises the question of how the body maintains the regulation of its functions by peptide hormones when a hormone may originate from a variety of cells

Biochemical Actions of

Hormones V1 Gerald Litwack, 2012-12-02 Biochemical Actions of Hormones Volume I explores the significant developments toward understanding the primary effects of hormones in cellular receptors at the molecular level. This book is composed of 12 chapters that survey the molecular and biochemical approaches bearing on the problem of hormone mechanism. The opening chapters discuss the thyroid hormonal responses during metamorphic process in Amphibia, the primary role of hormones in biochemical differentiation, the influence of hormones on protein synthesis, and the importance of protein synthesis mechanism and the biochemical rhythms within the pineal gland and the rhythm in hepatic tyrosine transaminase activity. The subsequent chapters examine the effects of a number of hormones on transport systems in the cell membranes, the protein interaction with steroids, and the influence of insulin on protein and nucleic acid metabolism. The remaining five chapters deal with the physiology mechanism of action and biological effects of various hormones such as mineralocorticoids, parathyroid hormone, calcitonin, thyrotropin, and plant hormones. This book is an invaluable source for endocrinologists.

Polypeptide Hormones Ruth Porter, David W. FitzSimons, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology, chemistry, and medicine assembled to present papers and discuss results. The Novartis Foundation, originally known as the Ciba Foundation, is well known to scientists and clinicians around the world.

Biochemical Actions of Hormones V5 Gerald Litwack, 2012-12-02 Biochemical Actions of Hormones Volume V explores the nature of interaction of multiple hormones in regulating specific phenotypes. This volume is organized into 11 chapters that include discussions on the developments in the understanding of the biochemistry and molecular biology of hormones. The opening chapters deal with the modifications of chromatin structure by hormones, the regulation of exocytosis, ontogeny of estrogen receptors, and the hormonal regulation of cells of the seminiferous tubule. The discussions then shift to the advances on the progesterone receptor, the role of glucocorticoids in the integration of mammary tumor virus genes, and a model system for estrogen action. Other chapters examine the physiology, molecular action, and biological effects of somatomedins, epidermal growth factors, and 1,25 dihydroxyvitamin. The remaining chapters focus on multihormone control of mRNA for a specific hepatic protein. This book is of great value to endocrinologists.
