Biodegradation Probability Program Database:

Biodegradation Probability Program Philip H. Howard, William M. Meylan, 1992-06-26 A powerful PC based program designed for regulatory screening and prioritizing and industrial screening of chemicals Take the guesswork out of calculating the probability of a chemical biodegrading rapidly or slowly under anaerobic conditions in a mixed culture of microorganisms Biodegradation Probability Program does the calculations for you using fragment constants developed with multiple linear and non linear regressions and data from Syracuse Research Corporation's evaluation biodegradation database BIODEG The program will run on any IBM or IBM compatible computer with 260K RAM Biodegradation Probability Program is already being used by the U S Environmental Protection Agency EPA and major chemical companies It is indispensable for environmental professionals and regulatory people who need to predict biodegradability for chemicals lacking experimental data The program will be of special interest to all remediation firms working with biodegradation technologies

products are formed how they move through the environment and their environmental effects The book also presents modelling and analytical approaches for understanding the occurrence fate and effects of transformation products in the environment It is of interest to scientists in academia the chemicals industry and regulators as well as graduate students in Environmental Chemistry and Ecotoxicology **Reviews in Computational Chemistry, Volume 7** Kenny B.

Lipkowitz,Donald B. Boyd,2009-09-22 This is the seventh volume in the successful series designed to help the chemistry community keep current with the many new developments in computational techniques The writing style is refreshingly pedagogical and non mathematical allowing students and researchers access to computational methods outside their immediate area of expertise Each invited author approaches a topic with the aim of helping the reader understand the material solve problems and locate key references quickly Understanding the Chemistry of the Environment Francisco G. Calvo-Flores,2025-01-28 Understand the properties and consequences of chemical pollutants Environmental chemistry is the field of study which focuses on chemical species natural or man made and their impact on the atmosphere water and soils It is a growing area of research and technological development increasingly prominent in university chemistry curricula There is more demand than ever for a strong textbook overview of this thriving interdisciplinary subject and its myriad applications Understanding the Chemistry of the Environment meets this demand with an exploration of the chemical aspects of pollution and its consequences It offers a clear explanation of the relationship between chemical structure physiochemical properties of natural and anthropogenic substances and environmental impact Drawing upon advances in chemistry biochemistry physics engineering toxicology and more it is a must own for students and researchers in environmental chemistry Understanding the Chemistry of the Environment readers will also find Overview of major chemical pollutants and their ecotoxicological effects Understanding the Chemistry of the Environment is ideal for undergraduate students in environmental chemistry courses as well as graduate students in need of a reference work on environmental chemistry

Chemical Property Estimation Edward Baum,2018-05-11 Our world is widely contaminated with damaging chemicals and companies create thousands of new potentially dangerous chemicals each year Due to the difficulty and expense of obtaining accurate measurements and the unreliability of reported values we know surprisingly little about the properties of these contaminants Determining the properties of chemicals is critical to judging their impact on environmental quality and in making decisions about emission rates clean up and other important public health issues Chemical Property Estimation describes modern methods of estimating chemical properties methods which cost much less than traditional laboratory techniques and are sufficiently accurate for most environmental applications Estimation methods are used to screen chemicals for testing design monitoring and analysis methods design clean up procedures and verify experimental measurements The book discusses key methods for estimating chemical properties and considers their relative strengths and weaknesses Several chapters are devoted to the partitioning of chemicals between air water soil and biota and properties

such as solubility vapor pressure and chemical transport Each chapter begins with a review of relevant theory and background information explaining the applications and limitations of each method Sample calculations and practical advice on how and when to use each method are included as well Each method is evaluated for accuracy and reliability Computer software databases and internet resources are evaluated as well as other supplementary material such as fundamental constants units of measure and more

Plasticizers Database [electronic Resource] Anna Wypych,2004 *Chemical Toxicity Prediction* Mark T. D.

Cronin, Judith Madden, Steven Enoch, David Roberts, 2013 The aim of this book is to provide the scientific background to using the formation of chemical categories or groups of molecules to allow for read across i.e. the prediction of toxicity from chemical structure It covers the scientific basis for this approach to toxicity prediction including the methods to group compounds structural analogues and or similarity mechanism of action and the tools to achieve this The approaches to perform read across within a chemical category are also described The book will provide concise practical guidance for those wishing to apply these methods in risk hazard assessment and will be illustrated with case studies *Chemical Toxicity Prediction* is the first book that addresses the concept of category formation and read across for toxicity prediction specifically This topic has really taken off in the past few years due to concerns over dealing with the REACH legislation and also due to the availability of the OECD QSAR Toolbox Much lengthy and complex guidance is available on category formation e.g. from the OECD and to a lesser extent the European Chemicals Agency but there is no one single source of information that covers all techniques in a concise user friendly format There is a real need for this information as in silico toxicology has come to the fore in recent years primarily as a result of the EU REACH legislation but also due to many other drivers e.g. reduction of animal testing Cosmetics regulation Category formation is seen as the only practical approach to make rational and transparent predictions for complex human toxicological endpoints The book covers all the areas required to create a robust category and perform read across
