Biodiversity And Landscapes A Paradox Of Humanity:

Biodiversity and Landscapes Ke Chung Kim, Robert D. Weaver, 1994-08-26 Experts from different disciplines discuss the nature origin and possible solutions to the problem of landscape degradation and diminishing global biodiversity

Transdisciplinary Challenges in Landscape Ecology and Restoration Ecology - An Anthology Zev Naveh, 2007-06-06 Capitalizing on forty years of intensive ecological studies this anthology presents a collection of widely dispersed major publications on theoretical and practical Mediterranean global environmental and landscape issues Each chapter features a comprehensive study of ecological and landscape issues synthesized in the introduction and woven with autobiographical experiences The concluding chapter calls for a transdisciplinary shift in all environmental scientific fields and particularly in landscape and restoration ecology to cope with the complex closely interwoven ecological socio economical political and cultural crises facing human society during the present crucial transition from the industrial to the post industrial global information age Updating and broadening the scope of the groundbreaking Springer book on Landscape Theory and Applications by the author and Lieberman 1994 this is a unique transdisciplinary attempt based on advanced systems complexity theories which link the natural and human sciences

Biodiversity in ecosystems: principles and case studies of different complexity levels Anselm Kratochwil, 2013-12-01 This volume does not aim at merely adding to the vast and increasing number of individual publications on biodiversity Rather it is our objective to investigate biodiversity on the previously little studied coenosis and landscape levels Phytosociological and animal ecological fields are considered as well as theoretical approaches to biodiversity and aspects of its application in nature and landscape protection and preservation Since biodiversity has so far been predominantly studied in the Anglo American area it seemed to be of value to discuss this complex topic from a central and southern European viewpoint based on data gathered in these regions and thus to promote a global discussion

Mediterranean Island Landscapes Ioannis N. Vogiatzakis, Gloria Pungetti, A.M. Mannion, 2008-02-26 Mediterranean islands exhibit many similarities in their biotic ecological physical and environmental characteristics There are also many differences in terms of their human colonization and current anthropogenic pressures This book addresses in three sections these characteristics and examines the major environmental changes that the islands experienced during the Quaternary period The first section provides details on natural and cultural factors which have shaped island landscapes It describes the environmental and cultural changes of the Holocene and their effects on biota as well as on the current human pressures that are now threats to the sustainability of the island communities The second section focuses on the landscapes of the largest islands namely Sicily Sardinia Corsica Cyprus Crete Malta and the Balearics Each island chapter includes a special topic reflecting a particular characteristic of the island Part three presents strategies for action towards sustainability in Mediterranean islands and concludes with a comparison between the largest islands Despite several published books on Mediterranean ecosystems landscapes there is no existing book dealing with

Mediterranean islands in a collective manner Students researchers and university lecturers in environmental science geography biology and ecology will find this work invaluable as a cross disciplinary text while planners and politicians will welcome the succinct summaries as background material to planning decisions **General Technical Report RM. ,1993**

Proceedings of the World Anthropology Congress 2023 (WAC 2023) Tulishree Pradhan,Deepak Kumar Behera,Savarimuthu Gregory,Pooran Chand Joshi,Madhuri Meelee,Maria Stoicheva,2023-12-29 This is an open access book The World Anthropology Congress 2023 intends to explore multiple avenues for global peace and harmony for sustainable development of humankind particularly of the indigenous Adivasi and tribal people of the world It is now well understood that Anthropology as a discipline can lend a powerful voice to non hegemonic and marginalized cultural perspectives on both Global Peace and Development for ensuring social justice to the tribal and autochthones people Since Global Peace and Development are multi layered processes and Anthropology promotes the tradition of multifaceted thinking that ranges from the local to the global and traverses the space in bet ween the discipline can unveil new dimensions in promoting lasting peace and sustained human development Further accumulated scientific evidence proves that many non violent societies co existed peacefully as a norm throughout the prehistoric period of the human existence This indicates that human co existence and peace were not mere words but concepts that are integral to the texts of Anthropology Therefore deliberations in this Congress will contribute to the processes of Peace and Development of human society at different levels The proposed World Anthropology Congress 2023 will continue this line of enquiry by playing a crucial role in creating a more contemporary and relevant debate on indigeneity social justice and global peace *Exploring Wild Law* Peter Burdon,2011 From cover Wild law is a groundbreaking approach to law that stresses human interconnectedness and dependence on nature It critiques existing law for promoting environmental harm and seeks to establish a mutually enhancing human Earth relationship For the first time this volume brings together voices from the leading proponents of wild law around the world It introduces readers to the idea of wild law and considers its relationship to environmental law the rights of nature science religion property law and international governance **Living in a Dynamic Tropical Forest Landscape** Nigel Stork,Stephen M. Turton,2009-01-26 This book brings together a wealth of scientific findings and ecological knowledge to survey what we have learned about the Wet Tropics rainforests of North Queensland Australia This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment including the social and economic dimensions The most thorough assessment of a tropical forest landscape to date Explores significant scientific breakthroughs in areas including conservation genetics vegetation modeling agroforestry and revegetation techniques biodiversity assessment and modeling impacts of climate change and the integration of science in natural resource management Research achieved in part due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management the Rainforest CRC Written by a number of distinguished international experts contains chapter summaries and section commentaries Biological Diversity L. N.

Petrov,2003 One of the cornerstones of life s wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety

Coastal Dunes M. L. Martínez,Norbert P. Psuty,2007-09-14 Coastal dunes occur in almost every latitude from tropical to polar and have been substantially altered by human activities Many are already severely and irreversibly degraded Although these ecosystems have been studied for a long time as early as 1835 there has been a strong emphasis on the mid latitude dune systems and a lack of attention given to the tropics where unfortunately much of the modern exploitation and coastal development for tourism is occurring This book brings together coastal dune specialists from tropical and temperate latitudes which together cover a wide set of topics including geomorphology community dynamics ecophysiology biotic interactions and environmental problems and conservation A major product of this book is a set of recommendations for future research identifying relevant topics where detailed knowledge is still lacking It also identifies management tools that will promote and maintain the rich diversity of the dune environments in the context of continuing coastal development

Status and Management of Neotropical Migratory Birds Deborah M. Finch,Peter W. Stangel,1993 **Society and Exploitation Through Nature** Martin Phillips,Tim Mighall,2014-06-06 Society and Exploitation Through Nature offers an integrated approach to the environment linking the philosophical social and physical sciences to environmental problems and issues The text covers three main themes exploitation of nature and society the limits of exploitation through sustainability and managing environmental problems These themes are illustrated throughout the book with global case studies **Insect Biodiversity** Robert G. Footitt,Peter H. Adler,2009-03-03 Insect Biodiversity Science and Society brings togetherleading scientific experts to assess the impact insects have onhumankind and the earth s fragile ecosystems It examines whyinsect biodiversity matters and how the rapid evolution of insectspecies is affecting us all Insects and related arthropods make up more than 50 percent ofthe known animal diversity globally yet a lack of knowledge aboutinsects is hindering the advance of science and society This bookexplores the wide variety in type and number of insect species andtheir evolutionary

relationships Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of insect species will have on the world The book concludes that a better understanding of the biology and ecology of insects is the only way to sustainably manage ecosystems in an ever changing global environment Measuring Landscapes Andre Botequilha Leitao, Joseph Miller, Jack Ahern, Kevin McGarigal, 2012-09-26 This practical handbook bridges the gap between those scientists who study landscapes and the planners and conservationists who must then decide how best to preserve and build environmentally sound habitats Until now only a small portion of the relevant science has influenced the decision making arenas where the future of our landscapes is debated and decided The authors explain specific tools and concepts to measure a landscape's structure form and change over time Metrics studied include patch richness class area proportion patch number and density mean patch size shape radius of gyration contagion edge contrast nearest neighbor distance and proximity These measures will help planners and conservationists make better land use decisions for the future *Landscape Ecology* Zev Naveh, Arthur S. Lieberman, 2013-06-29 In the preface to the softcover edition of this book in 1989 we stated Since the publication of the first edition of this book landscape ecology has made great strides It has overcome its continental isolation and has also established itself in the English speaking world By attracting both problem inquiry and problem solving oriented scientists with different cultural academic and professional backgrounds from all over the world it has broadened not only its geographical but also its conceptual and methodological scopes We are pleased to confirm in 1993 that the growth of landscape ecology continues and to again express our gratification at the encouraging response to this first English language monograph on the subject and its contribution to these developments As before we feel special satisfaction that it has reached not only the shelves of libraries and academic researchers but that it has also appealed to professional practitioners teachers and their students from industrialized and developing countries embracing the broad range of fields related to landscape ecology in the natural sciences as well as in the humanities *Searching for Sustainability* Bryan G. Norton, 2003 This book examines from a multidisciplinary viewpoint the question of what we mean what we should mean by setting sustainability as a goal for environmental management The author trained as a philosopher of science and language explores ways to break down the disciplinary barriers to communication and deliberation about environment policy and to integrate science and evaluations into a more comprehensive environmental policy Choosing sustainability as the keystone concept of environmental policy the author explores what we can learn about sustainable living from the philosophy of pragmatism from ecology from economics from planning from conservation biology and from related disciplines The idea of adaptive or experimental management provides the context while insights from various disciplines are integrated into a comprehensive philosophy of environmental management The book will appeal to students and professionals in the fields of environmental policy and ethics conservation biology and philosophy of science Managing for Healthy Ecosystems David J. Rapport, Bill

L. Lasley, Dennis E. Rolston, N. Ole Nielsen, Calvin O. Qualset, Ardeshir B. Damania, 2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population. Based on a symposium on ecosystem health, *Managing for Healthy Ecosystems* identifies key issues that must be resolved if there is to be progress in this complex area, such as: Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments; Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change; agroecosystems restoration of forests; politics, culture, and tradition. Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide. The more than 100 peer-reviewed papers are grouped into three major parts. The first, *Emerging Concepts*, explores the diverse meanings of ecosystem health within ecological, socio-economic, and human health perspectives and the linkages to related concepts such as ecological integrity, sustainable development, and ecological footprints. The second part, *Issues and Methods*, introduces methods for assessing and monitoring ecosystem health, including strategies for gaining political and stakeholder input and support for science-based ecosystem management. The final part, *Case Studies*, reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems.

Bioregional Planning D J Brunckhorst, 2013-10-11 Presenting a pragmatic mixture of science, landscape ecology, ecosystem management, sociology, policy development, and methods for transforming social and institutional cultures, *Bioregional Planning: Resource Management Beyond the New Millennium* is a timely and practical guide for the analysis, planning, and development of bioregional projects for a sustainable future. Significantly, this book presents the strategic actions necessary to plan for, manage, and adapt to Ecologically Sustainable Development with a view beyond the new millennium and towards the next. Postgraduate researchers and policy makers in natural resources management, land planning, sustainable agriculture, rural sciences, ecosystem management, and conservation biology will find this book captures the essence of bioregional planning succinctly and makes a compelling argument for why it is a key mechanism in the development of effective governance institutions.

Nature, Value, Duty Christopher J. Preston, Wayne Ouderkirk, 2006-11-17 Gifford Lecturer and Templeton Prize winner, Holmes Rolston III is widely known as the father of environmental ethics. His writings range between natural philosophy and theology and include detailed presentations of an interlocking position that includes aesthetics, value theory, natural resource policy, wilderness advocacy, and sustainable development. *Nature, Value, and Duty: Life on Earth with Holmes Rolston III* is a collection of contemporary writings on the work of Holmes Rolston III. The authors contributing to this volume are a mixture of senior scholars in environmental ethics and new voices in philosophy and in literature. Together they provide an in-depth evaluation of many of the topics discussed by Rolston. They probe the strengths and weaknesses of his work and suggest valuable correctives. Rolston himself, in a

detailed reply to each of his critics at the end of the volume reveals where some of these criticisms sting him the most and in the process provides one of the most detailed and articulate defenses of his position ever offered
