Priorities for the Conservation of Mammalian Diversity Abigail Entwistle,Nigel Dunstone,2000-07-20 Scientific yet accessible review of mammalian conservation as a model demonstrating wider issues in conservation **Key Topics in Conservation Biology** David Macdonald,Katrina Service,2009-03-12 This important new book addresses key topics in contemporary conservation biology Written by an internationally renowned team of authors Key Topics in Conservation Biology explores cutting edge issues in modern biodiversity conservation including controversial subjects such as rarity and prioritization conflict between people and wildlife the human aspect of conservation the relevance of animal welfare and the role of nongovernment organizations Key Topics also tackles the management of wildlife diseases and examines the impact of bushmeat extraction and the role of hunting in the conservationist s toolbox Other essays explore basic tools of conservation biology such as computer modeling conservation genetics metapopulation processes and the ingenious use of hi tech equipment Each topic is explored by three top international experts assembled to bring their cross cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives The interdisciplinary nature of biodiversity conservation is reflected throughout the book Each essay examines the fundamental principles of the topic the methodologies involved and crucially the human dimension In this way Key Topics in Conservation Biology embraces the issues from cutting edge ecological science to policy environmental economics governance ethics and the practical issues of implementation Key Topics in Conservation Biology will be a valuable resource in universities and colleges government departments and conservation agencies It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and those taking Masters degrees in any field relevant to conservation Conservation practitioners policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable **Biodiversity** D. J. Perlman,G. Adelson,2009-07-01 Biodiversity has become a buzzword in the environmental movement and in science and is increasingly being taught in university degree courses This new text is designed as a primer giving non specialists an introduction to the historical context current debates and ongoing research in this subject *Assessment of Biodiversity for Improved Forest Planning* Peter Bachmann,Michael Köhl,Risto Päivinen,2013-04-17 The Global Biodiversity Strategy signed in 1992 in Rio de Janeiro and the resolutions at the Ministerial Conferences on the Protection of Forests in Europe in Strasbourg 1990 and Helsinki 1993 commit the signatory states to monitor nationally the state of biodiversity and to sustain the characteristic natural variation in the country Sustainability and long term planning are the two terms best describing the philosophy of traditional forest management practices However the traditional planning techniques are not primarily developed to maintain sustainability of biodiversity

The gap between the international commitments and the practices in forest assessment and management is obvious. This publication presents experience in methodology for assessing and monitoring the variation of ecosystems and habitats in relation to biodiversity conservation and for integrating biodiversity in regional planning of forest management and land use. The state of the art in the field of natural resource assessments with special reference to forest biodiversity is reviewed. Progress in integrating data on biodiversity in forest management planning is presented and the information needs regarding biodiversity conservation and the question to what degree assessment methods for forest biodiversity can be simplified for practical applications are discussed. The book is intended for researchers and practitioners in the field of forest and environmental planning and environmental policies.

A Comprehensive Handbook on Biodiversity Asish Kumar Ghosh, 2008-01-01 Biodiversity is becoming the keyword for sustaining human society and the ecosystem. The impacts of development on biological diversity over exploitation of resources of commercial value, changes in land use and land cover and fragmentation of habitats have led to the fastest rate of decline in biodiversity in the 20th Century. This publication provides an insight into the concept of biodiversity, its value and uses, aspects of conservation of material and traditional knowledge, the linkage between ethnic communities and biodiversity and several other topics of interest in a lucid and user-friendly manner.

Decolonizing Nature William Adams, Martin Mulligan, 2012-04-27 British imperialism was almost unparalleled in its historical and geographical reach, leaving a legacy of entrenched social transformation in nations and cultures in every part of the globe. Colonial annexation and government were based on an all-encompassing system that integrated and controlled political, economic, social and ethnic relations and

required a similar annexation and control of natural resources and nature itself Colonial ideologies were expressed not only in the progressive exploitation of nature but also in the emerging discourses of conservation At the start of the 21st century the conservation of nature is of undiminished importance in post colonial societies yet the legacy of colonial thinking endures What should conservation look like today and what indeed whose ideas should it be based upon Decolonizing Nature explores the influence of the colonial legacy on contemporary conservation and on ideas about the relationships between people politics and nature in countries and cultures that were once part of the British Empire It locates the historical development of the theory and practice of conservation at both the periphery and the centre firmly within the context of this legacy and considers its significance today It highlights the present and future challenges to conservationists of contemporary global neo colonialism The contributors to this volume include both academics and conservation practitioners They provide wide ranging and insightful perspectives on the need for and practical ways to achieve new forms of informed ethical engagement between people and nature

Biodiversity Hotspots Frank E. Zachos,Jan Christian Habel,2011-09-15 Biodiversity and its conservation are among the main global topics in science and politics and perhaps the major challenge for the present and coming generations This book written by international experts from different disciplines comprises general chapters on diversity and its measurement human impacts on biodiversity hotspots on a global scale human diversity itself and various geographic regions exhibiting high levels of diversity The areas covered range from genetics and taxonomy to evolutionary biology biogeography and the social sciences In addition to the classic hotspots in the tropics the book also highlights various other ecosystems harbouring unique species communities including coral reefs and the Southern Ocean The approach taken considers but is not limited to the original hotspot definition sensu stricto and presents a chapter introducing the 35th hotspot the forests of East Australia While due to a bias in data availability the majority of contributions on particular taxa deal with vertebrates and plants some also deal with the less studied invertebrates This book will be essential reading for anyone involved with biodiversity particularly researchers and practitioners in the fields of conservation biology ecology and evolution

Fundamentals of Conservation Biology Malcolm L. Hunter, Jr.,James P. Gibbs,2006-10-23 In the new edition of this highly successful book Malcolm Hunter and new co author James Gibbs offer a thorough introduction to the fascinating and important field of conservation biology focusing on what can be done to maintain biodiversity through management of ecosystems and populations Starting with a succinct look at conservation and biodiversity this book progresses to contend with some of the subject s most complex topics such as mass extinctions ecosystem degradation and over exploitation Discusses social political and economic aspects of conservation biology Thoroughly revised with over six hundred new references and web links to many of the organizations involved in conservation biology striking photographs and maps

Hawkes, Nigel Maxted, B.V.

Ford-Lloyd,2012-12-06 It is a distressing truism that the human race during the last millennium has caused the exponential loss of plant genetic diversity throughout the world This has had direct and negative economic political and social consequences for the human race which at the same time has failed to exploit fully the positive benefits that might result from conserving and exploiting the world s plant genetic resources However a strong movement to halt this loss of plant diversity and enhance its utilisation for the benefit of all humanity has been underway since the 1960 s Frankel and Bennett 1970 Frankel and Hawkes 1975 This initiative was taken up by the Convention on Biological Diversity CBD 1992 that not only expounds the need to conserve biological diversity but links conservation to exploitation and development for the benefit of all Article 8 of the Convention clearly states the need to develop more effective and efficient guidelines to conserve biological diversity while Article 9 along with the FAO International Undertaking on Plant Genetic Resources promotes the adoption of a complementary approach to conservation that incorporates both ex situ and in situ techniques
