*Biodiversity and Evolution of Glacial Water Ecosystems in the Rila Mountains* Vasil Golemanski, 2000      *Environmental Water Requirements in Mountainous Areas* Elias Dimitriou, Christina Papadaki, 2021-10-19

Environmental Water Requirements in Mountainous Areas presents comprehensive and scientifically sound approaches and methodologies for estimating the environmental water requirements and tradeoffs for water allocation by analyzing anthropogenic and natural water needs. The book covers environmental water management issues in mountainous areas specifically focusing on the Mediterranean region which exhibits significant contrasts in its demographic and hydrologic features. The authors include paradigms and information that will be useful for water resources managers, decision makers, scientists working in the fields of ecology and water resources management, engineers that design hydraulic works and environmental policymakers. Offers a complete background, screening on theoretical and practical guidelines on estimating environmental water requirements in mountainous areas. Promotes and guides interdisciplinary work with information on policies and best practices in the field of ecological flows and water resources management. Provides examples and case studies on the successful implementation efforts of ecological flows to analyze lessons learned and overcome practical issues and solutions.

Mountain Ice and Water: Investigations of the Hydrologic Cycle in Alpine Environments is a new volume of papers reviewed and edited by John Shroder, Emeritus Professor of Geography and Geology at the University of Nebraska at Omaha, USA, and Greg Greenwood, Director of the Mountain Research Initiative from Bern, Switzerland. Chapters in this book were derived from research papers that were delivered at the Perth III Conference on Mountains of our Future Earth in Scotland in October 2015. The conference was established to help develop the knowledge necessary to respond effectively to the risks and opportunities of global environmental change and to support transformations toward global sustainability in the coming decades. To this end, the conference and book have investigated the future situation in mountains from three points of view: 1. Dynamic Planet: Observing, explaining, understanding, and projecting Earth environmental and societal system trends, drivers, and processes and their interactions to anticipate global thresholds and risks. 2. Global Sustainable Development: Increasing knowledge for sustainable, secure, and fair stewardship of biodiversity, food, water, health, energy, materials, and other ecosystem services. 3. Transformations towards Sustainability: Understanding transformation processes and options, assessing how these relate to human values, emerging technologies, and social and economic development pathways, and evaluating strategies for governing and managing the global environment across sectors and scales. Derived from research
